SECTION A.

PROPOSED PROJECT AND FUNDING STATUS

1. Project Purpose and Need

Water Quantity Problems and Inadequate System or System Components

Storms regularly flood Garvey Avenue in the City of El Monte, California (Figure 1), where the street passes under the Southern Pacific Railroad at the Garvey Avenue underpass. The existing stormwater pumps and conveyance pipes draining the underpass are insufficient to effectively convey stormwater from the street's surface to the intended storm drainage facilities.

Each year during the rainy season, flooding occurs in the Garvey Avenue underpass in the City of El Monte. The existing Garvey Avenue underpass pump station was constructed in 1934, and land use surrounding it has changed over the past 82 years. The pumps were replaced within the last 10 years, but the pump station is still insufficient to handle the stormwater load at the Garvey Avenue underpass from minor and major (the 100-year storm) precipitation events.

The existing Garvey Avenue underpass pump station consists of a 6-foot by 9-foot, 4-inch concrete sump with two submersible pumps with a combined capacity of 1,400 gallons per minute (gpm). The pumps transfer water from the underpass into a catch basin on the corner of Garvey Avenue and Valley Boulevard, which drains into a City of El Monte storm drain system along Valley Boulevard that conveys flow to the Rio Hondo Channel to the west. This flow configuration has proved to be deficient.

In addition, northeast of the Garvey Avenue underpass, three existing 24-inch culverts convey stormwater from Exline Street north of Interstate 10 (I-10), under the expressway, and to outlets on Maxson Road south of I-10. Surface drainage from that point is deficient.

The purpose of this project is to improve the storm drain lines and pump station, and it is needed to address the system's insufficient capacity to remove stormwater from Garvey Avenue.

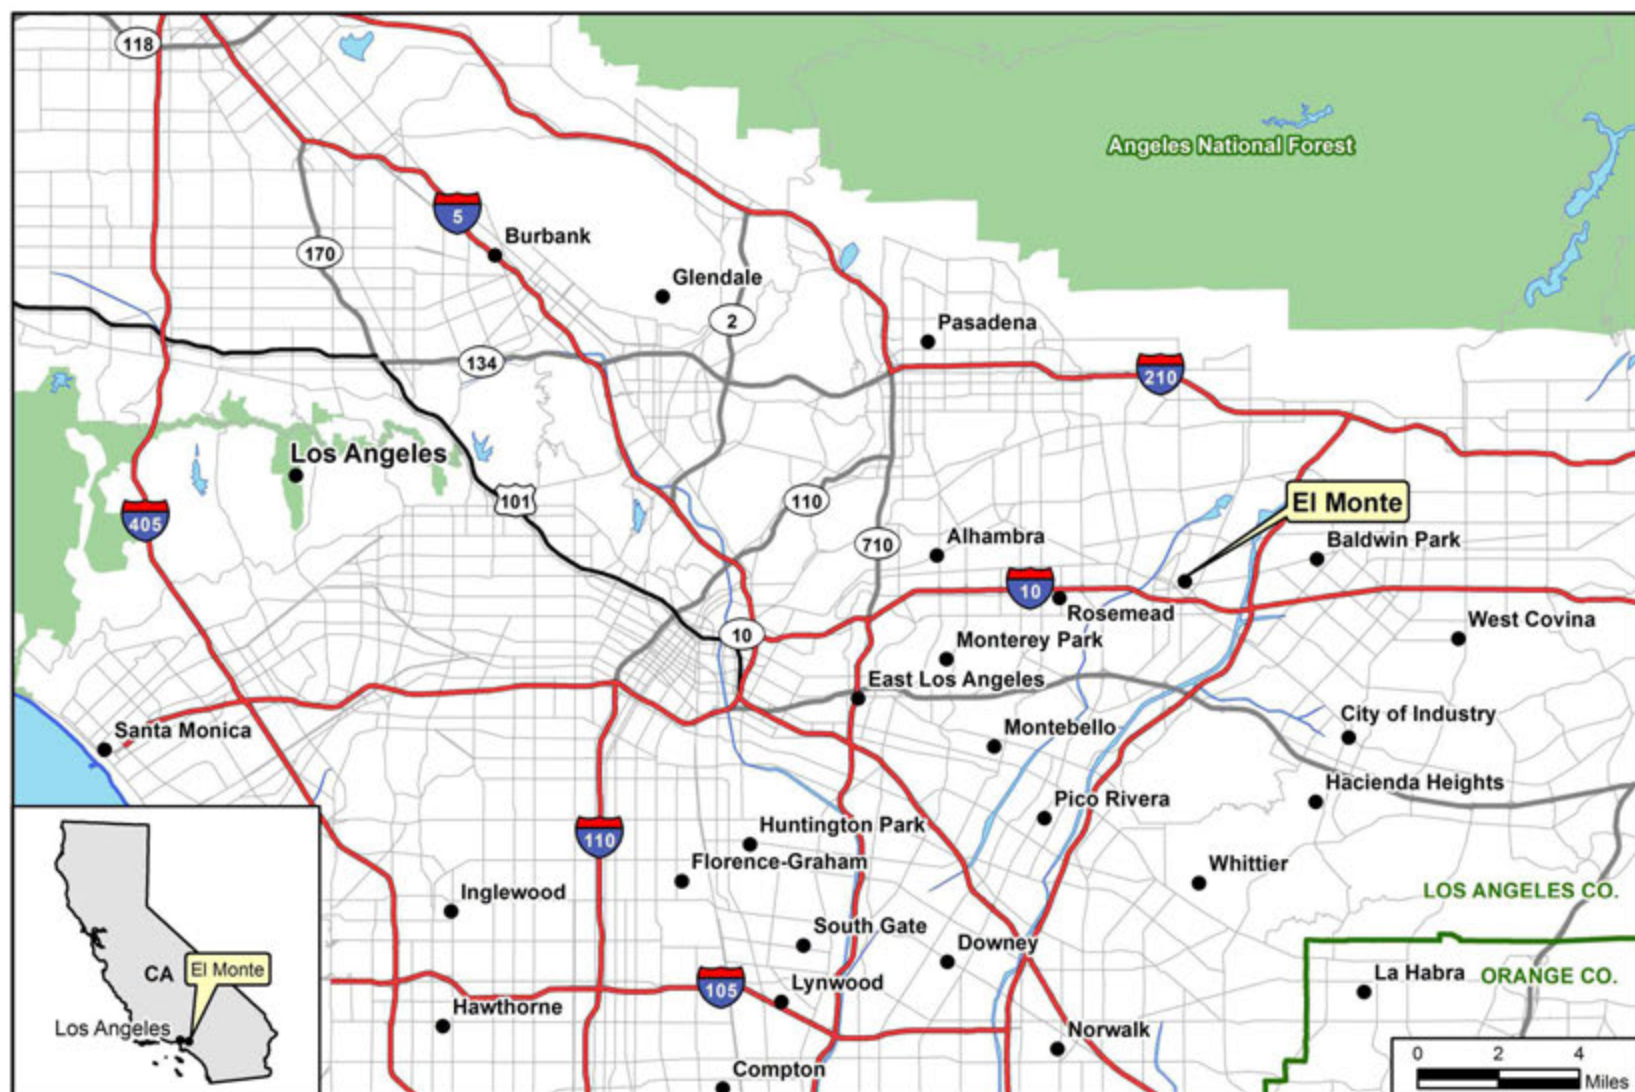

2. Project Description

Project Summary

The City of El Monte proposes to construct two new storm drain lines and upgrade the existing pump station to minimize flooding at the Garvey Avenue underpass. The new storm drain lines would convey the outflow from the new pump station to a new outfall on the San Gabriel River, divert some stormwater away from the underpass, and connect to an existing Los Angeles County Flood Control District (LACFCD) storm drain (Durfee storm drain). The existing pump station and pumps would be replaced with a larger capacity pump station and pumps.

Planning Area Description

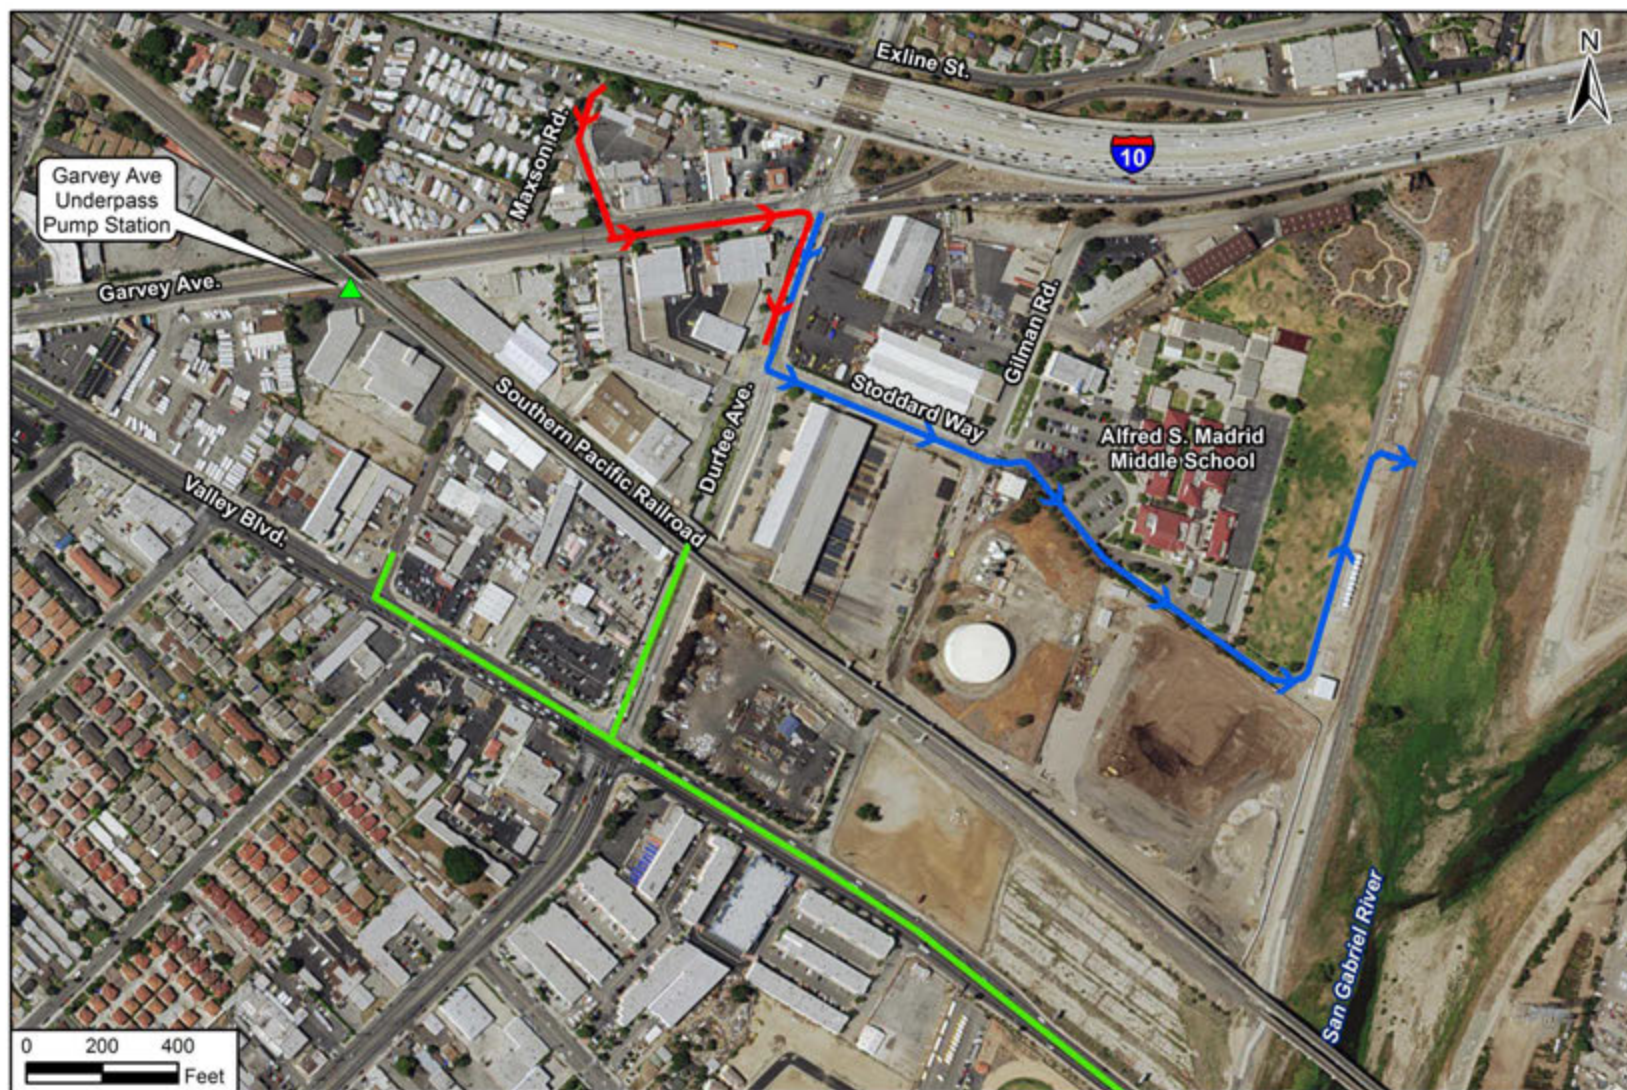

The proposed project would occur in the City of El Monte, California, in Los Angeles County. The City of El Monte is the eastern part of Los Angeles County, between Alhambra to the west and Baldwin Park to the east. The project site is located near I-10 and Garvey Avenue and is generally bounded by the triangular area formed by the San Gabriel River, the Southern Pacific Railroad, I-10, and Valley Boulevard (Figure 2).

General Location

El Monte, California

Project Components
El Monte, California

Figure 2

Planning Period

Project planning began with commissioning a preliminary design study and report, which was completed in 2010. Proposals from contracting firms are due to the City of El Monte in the latter part of 2016, with award and project commencement to follow.

Description of Project Construction Phases

Details of construction phases will not be known until a project design has been selected by the City of El Monte.

Owner and Operator of the Facilities

The City of El Monte owns, operates, and maintains the stormwater facilities. Incorporated in 1912 as a general law city, the City of El Monte is the hub of the San Gabriel Valley, located approximately 12 miles east of downtown Los Angeles, and is the ninth largest city in Los Angeles County, with a population of approximately 120,000. The City of El Monte occupies a 10-square-mile area and is primarily built out, with a few remaining undeveloped parcels.

Location of the Facilities

The project area is in the southeastern area of the City of El Monte adjacent to the neighboring cities of Baldwin Park and the City of Industry. The area is bounded to the north by I-10, to the east by the San Gabriel River, to the south by Valley Boulevard, and to the west by the Southern Pacific Railroad. The Garvey Avenue underpass separates traffic on Garvey Avenue from the Southern Pacific Railroad tracks.

Figure 2 shows the project components, including the Garvey Avenue underpass pump station and the alignment of the proposed storm drain lines. The pump station is located at Latitude 34° 3' 47.6166" and Longitude -118° 0' 55.9542". New storm drain Line "A" would begin at the intersection of Garvey Avenue and Durfee Avenue, align southward along Durfee Avenue, eastward along Gilman Road, northward along the east boundary of the Alfred S. Madrid Middle School, and discharge to the San Gabriel River. Proposed storm drain Line "B" would extend from the northern point of Maxson Road southward, along Garvey Avenue eastward, along Durfee Avenue southward, and discharge to the existing storm Durfee storm drain.

3. Relevant Design Parameters

Description of Major Unit Processes

The project includes three components: (1) a new pump station building, (2) three new pumps and one sump pump, and (3) two new storm drain pipes. The existing pump station at the Garvey Avenue underpass would be demolished and replaced with a new, larger-capacity pump station. The conceptual design specifies a pump station with three 9,000-gpm pumps [20 cubic feet per second (cfs)] and one 2,200-gpm (4.9 cfs) sump pump. One of the three 9,000-gpm pumps would be a backup pump, and the sump pump would not operate when the main pumps are running. Total pump station capacity would be approximately 60 cfs. The new pump station footprint would be roughly 48 feet by 20 feet and would include an adjacent electrical room with a footprint of roughly 12 feet by 21 feet. A new storm drain (Line A) would be installed to convey flow from upstream portions of the existing Durfee storm drain plus the outflow from the new pump station directly to the San Gabriel River. The second storm drain (Line B) would be installed to divert stormwater from areas upstream of the underpass near Maxson Road to the existing Durfee storm drain to reduce the hydraulic loading to the new pump station.

Flow Diagram

Figure 2 shows the proposed new storm drains (Lines A and B) and the proposed replacement pump station. All flow in Lines A and B would eventually discharge to the San Gabriel River.

Sewer/Water Pipe Lengths, Sizes, and Locations

Line A

Multiple catch basins at the upstream end of the existing Durfee storm drain would be re-routed into the proposed Line A along with the stormwater collected at the pump station. Line A would consist of 515 feet of 54-inch-diameter reinforced concrete pipe (RCP) and 2,318 feet of 72-inch-diameter RCP and would directly discharge into the San Gabriel River at Gilman Road, adjacent to the middle school.

Line B

To reduce hydraulic loading of the pump station, proposed Line B, a reinforced concrete box (RCB) storm drain, would be installed to intercept stormwater runoff from Maxson Road and convey it to the existing 48-inch RCP Durfee storm drain, just south of Garvey Avenue. Line B would consist of 931 feet of 3-foot-high by 5.5-foot-wide RCB and 340 feet of 4-foot-high by 5.5-foot-wide RCB storm drain.

Basic Design Criteria

Basic design parameters include the storm hydrograph for the pump station, maximum design flow for various portions of the system during a 50-year storm, available pipe slope, and water elevation at the pipe outlet. The flow data are used to determine the required pump capacity, and pipe sizes are determined based on flow and pipe slope.

Design Storm(s)

System design is based on hydraulic estimates using a 50-year storm.

Description of Major Stormwater Components (Structural and Non-Structural)

The major stormwater components are two new storm drain lines and an upgraded pump station to minimize flooding at the Garvey Avenue underpass. The new storm drain lines would convey the outflow from the replaced pump station to a new outfall on the San Gabriel River, divert stormwater away from the underpass, and connect to the existing Durfee storm drain.

4. Project Cost

Proposed Total Project Cost

Estimated Total Cost of Construction: \$3,868,313

Portion of Total Project Cost Funded by EPA

U.S. Environmental Protection Agency funded portion: \$485,000

SECTION B. EXISTING STORMWATER SYSTEM

1. Existing Stormwater System

Detailed Description of Existing Stormwater System

In the existing stormwater system, water from the vicinity of the Garvey Avenue underpass, including flow from the Maxson Road area, is pumped to an existing storm drain that ultimately discharges to the Rio Hondo Channel to the north. The existing Durfee storm drain currently conveys stormwater from the Durfee Avenue area to the San Gabriel River.

Description of Major Structural Components

The existing Garvey Avenue underpass pump station was constructed in 1934. It consists of a 6-foot by 9-foot, 4-inch concrete sump with two submersible pumps. The pumps were replaced within the last 10 years and have a combined capacity of 1,400 gpm (3.1 cfs). The existing discharge is pumped from the underpass into a catch basin located on the corner of Garvey Avenue and Valley Boulevard. The catch basin discharges to a City of El Monte storm drain system along Valley Boulevard that conveys flow to the Rio Hondo Channel. This flow configuration has proved to be deficient and needs to be realigned.

The existing storm drains at the project site consists of a 48-inch storm drain line (MTD 562), owned by the LACFCD, that drains south on Durfee Avenue towards Valley Boulevard and ultimately to the San Gabriel River. The upstream end of the Durfee storm drain system has multiple catch basins that receive surface runoff on the northerly corners of Durfee Avenue and Garvey Avenue. Three existing 24-inch culverts convey stormwater from Exline Street under I-10 and outlets on Maxson Road.

Design Parameters/Performance Criteria/Permits

The City of El Monte is a permittee under the *Waste Discharge Requirements for Municipal Separate Storm Sewer System (MS4) Discharges within the Coastal Watersheds of Los Angeles County, Except those Discharges Originating from the City of Long Beach MS4* issued by the Los Angeles Regional Water Quality Control Board (Order No. R4-2012-0175), which also serves as a National Pollutant Discharge Elimination System (NPDES) permit under the Federal Clean Water Act (NPDES No. CAS004001) and as Waste Discharge Requirements under California law (*Municipal NPDES permit*).

2. Existing System Performance

The proposed improvements are expected to address the current system inadequacies in managing stormwater flow.

SECTION C. NEED FOR PROPOSED PROJECT

1. Expanded Description of Need

The stormwater collection system owned by the City of El Monte in the vicinity of the Garvey Avenue underpass uses a pump station and drain lines to convey stormwater runoff into the storm drain system. Each year, during the rainy season, flooding occurs in the underpass, and city personnel must devote time to respond to traffic disruptions, including towing of motor vehicles that become trapped. The reason for flooding and traffic disruptions at this underpass is the limited capacity of the stormwater pump and drainage facilities and additional flow from Caltrans' roadway improvements upstream. The Garvey Avenue underpass was built in 1934. Land use surrounding the underpass has changed over the past 82 years. The existing pump station is insufficient to effectively convey stormwater runoff into the storm drain system.

2. Land Use Projections/Impervious Cover/Pollutant Sources

Continuing development in the area over the 82 years since the Garvey Avenue underpass was constructed resulted in the stormwater pumps and conveyance pipes being inadequate for the current quantity and flow of stormwater during precipitation events. Impervious cover in the area is nearly 100 percent. The project would not create a new pollutant source.

3. Calculations and Assumptions for Forecasted Flow

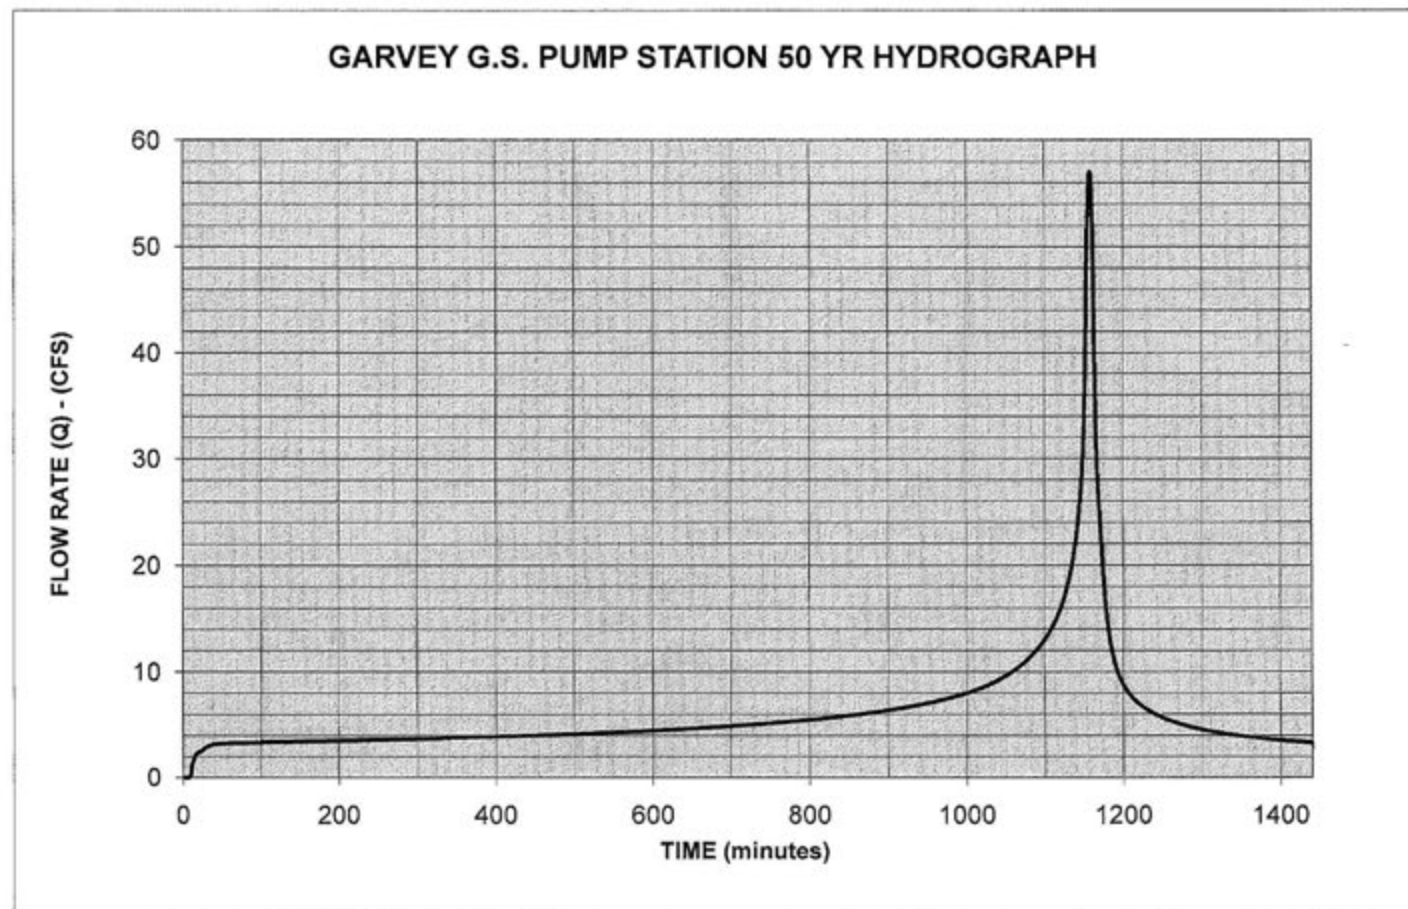

Table 1 presents the results of hydraulic calculations for storm drain pipes from areas contributing to each proposed storm drain pipe. Figure 3 presents the 50-year storm hydrograph used to design the pump station, which shows a short-term peak flow of 57 cfs.

Table 1. Summary of the results of the hydrology analyses			
	Storm Returns Period	Area (acres)	Flow at Storm Drain Outfall (cfs)
Durfee (Line A)	10-year	124.5	74.05
	50-year		151.24
Maxson (Line B)	10-year	48.3	51.2
	50-year		86.8

4. Future Environment without the Project

The flow capacity of existing pump station at the Garvey Avenue underpass is inadequate to handle existing stormwater flow during the rainy season. When heavy rain occurs, the underpass becomes flooded creating a requirement to close the road and redirect traffic. Motorists who attempt passage through the flooded roadway can become stranded. City personnel must devote time to respond to traffic disruptions, including towing of motor vehicles which become trapped at this underpass, even after the road is closed. These events will continue to occur periodically until project improvements are implemented.

Storm Day 4
Reduction Factor = 1.0
Total Runoff = 12.147 Acre-Ft
Peak Q = 57.05 CFS @ 1158 minutes

Garvey GS Pump Station 50-Year Hydrograph

Figure 3

SECTION D. ANALYSIS OF ALTERNATIVES

1. Development of Alternatives

No-action

Under the no-action alternative, the Garvey Avenue underpass pump station would not be replaced, and new stormwater drain lines would not be constructed. The stormwater pump and drainage facilities would remain inadequate and unable to sufficiently convey stormwater from the underpass. Flooding in the underpass during the rainy season would continue, and city personnel would have to close the road when it floods and tow motor vehicles that become trapped in the flood waters.

Optimum Utilization of Existing Facility

Use of the existing system with no structural change cannot be optimized to improve the current situation.

New Construction Alternatives

Only one construction alternative, as detailed in Section A, has been proposed by the City of El Monte. No other construction alternative will meet the scope of the project.

2. Identification of Selected Alternative

The preferred alternative is the proposed project described in Section A.

SECTION E. EXISTING ENVIRONMENT, ENVIRONMENTAL CONSEQUENCES AND MITIGATION MEASURES

1. Existing Environment

Public Health Problems Due to Water Quality

There are no public health problems due to water quality because this stormwater system is not a source of drinking water, operates only intermittently, and does not otherwise present potential exposure pathways for the public.

Water Quality Problems, Fish Kills, etc.

Surface water in the project area and other nearby areas drains toward the San Gabriel River (AECOM 2010), but no water quality issues are known or cited as reasons for implementing the proposed action. There are no water quality problems associated with the stormwater system because it operates only intermittently, does not support fish and wildlife populations, and does not otherwise affect environmental receptors impacted by changes in water quality.

Surface & Ground Water Hydrology

Surface water in the project area generally drains to the east towards the San Gabriel River (AECOM 2010). The general regional groundwater flow pattern is southward and westward from the Central Coastal Plain toward the ocean (DWR 2004). The project area is adjacent to the San Gabriel River, as shown in Figure 4.

Drinking Water Sources and Supply

There are no drinking water sources associated with the stormwater system.

Physiography, Topography, Geology & Soils

The proposed project area is in the San Gabriel valley. The streets within the project area are relatively flat with approximate ground slope of 0.5% (AECOM 2010). The grades within the Garvey Avenue underpass are significantly greater at approximately 3% to dip under the railroad tracks. The area generally drains to the east toward the San Gabriel River. The entire site is in an area that is subject to liquefaction (CDC 1999). Figure 5 shows the area geology.

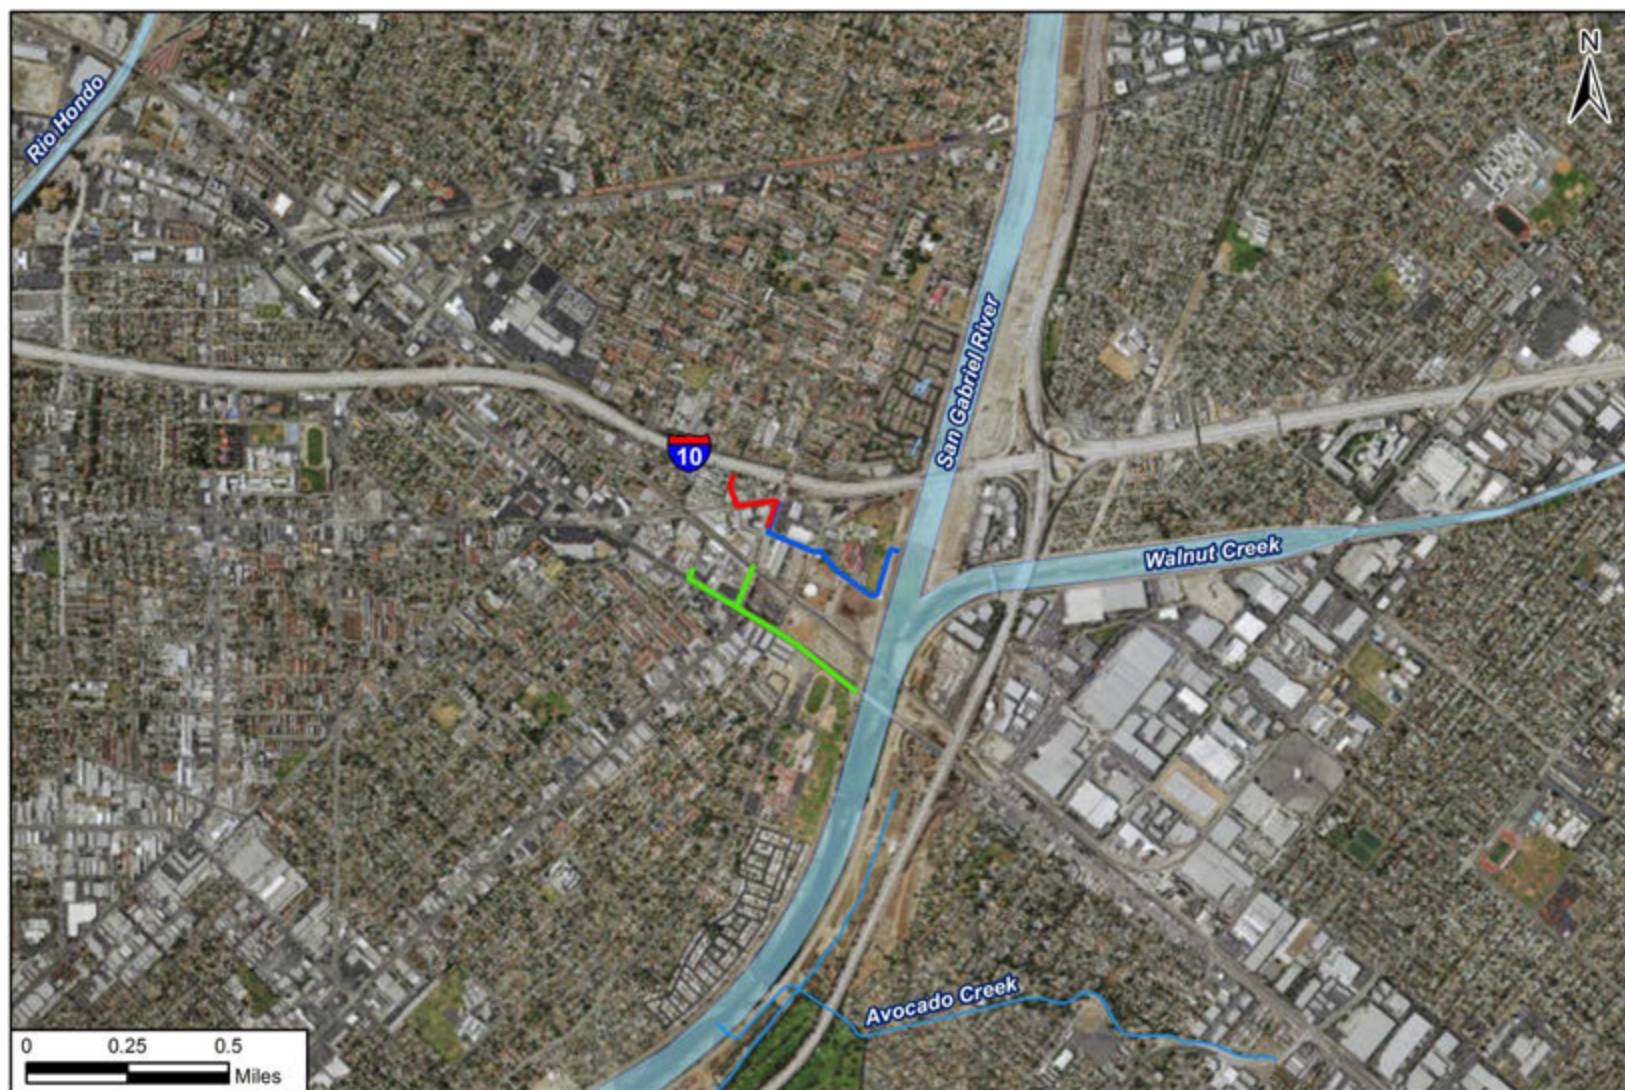

Federally Endangered & Threatened Species

A report for the project area was generated through the USFWS's Information for Planning and Conservation (IPaC) online system (see Appendix C). The system provides background information on listed species in an area of interest. A USFWS list of threatened and endangered species also was generated for the project area (Appendix C). Three Federally listed species have the potential to occur in the area (FWS 2016a, 2016c):

- Coastal California Gnatcatcher (*Polioptila californica californica*): (Federal: Threatened) (FWS2016a). They generally prefer open sage scrub, with California sagebrush as a dominant or co-dominant species, and are more abundant near areas where sage scrub transitions to chaparral (Mock 2004). Small, disjunct populations of the species have been documented in Los Angeles County.

- Least Bell's Vireo (*Vireo bellii pusillus*): (Federal: Endangered) (FWS 2016a). They inhabit dense, low, shrubby vegetation in generally early successional stages in riparian areas, brushy fields, young second-growth woodland, and coastal chaparral near water in arid regions (CLO 2015).
- Nevin's Barberry (*Berberis nevinii*): (Federal: Endangered) (FWS 2016a). Nevin's barberry is an evergreen shrub, historically found in scattered areas throughout Los Angeles, San Bernardino, Riverside, and possibly San Diego Counties. It is found in a variety of topographical conditions ranging from nearly flat sandy washes, terraces, and canyon floors to ridges and mountain summits (CDFW 2013).

Because the project location is a developed, highly urbanized area, no suitable habitat exists for any of these species. Therefore, the project would have "no effect" on listed species, and formal consultation with the USFWS under Section 7 of the Endangered Species Act is not required.

Archeological and Architectural Cultural Resources

To comply with the substantive requirements of Section 106 of the National Historic Preservation Act, EPA has defined the archaeological area of potential effects (APE) as the surfaces and depths that would be disturbed by excavation and storm drain installation activities, as well as the footprint of the Garvey Avenue underpass pump station building. The historical architectural APE is the pump station and the pipes and culverts that may be replaced that are 50 years or older. Staging areas would be limited to paved parking lots and areas along the APE and outside of the public right of way. No undertaking-related activities would occur outside of the APE.

EPA conducted a records search of the archaeological APE and surrounding areas via the South Central Coastal Information Center (SCCIC) of the California Historical Resources Information System (CHRIS) (Records Search File No.: 16371.2401). For the records search, the study area included a 1-mile buffer centered on the APE of the new storm drains. While no part of the APE has been previously surveyed, and no resources have been recorded within the APE, 39 surveys have been conducted within the study area, and 18 resources have been recorded in the same area.

The 39 surveys conducted within the study area were completed between 1969 and 2012 (one of the surveys was undated). The following 18 resources previously recorded within the study area (but outside the APE) include 1 prehistoric archaeological site, 11 historic buildings, 1 historic district, 1 historic highway/trail, 1 historic railroad, and 3 historic transmission/utility lines, which are detailed below:

- The prehistoric archaeological site (P-19-000136/CA-LAN-000136) is a habitation with burials on the opposite side of the San Gabriel River.
- The historic buildings (P-19-188913, P-19-188914, P-19-188915, P-19-188916, P-19-188917, P-19-188918, P-19-188919, P-19-188921, P-19-188922, P-19-188923, and P-19-188924) are concentrated in Baldwin Park on the opposite side of I-605 and the San Gabriel River.
- The historic district, consisting of the Woodland Duck Farms and Equestrian Center/Louise A. Ward Residence (P-19-004079/CA-LAN-004079H), is on the opposite side of the San Gabriel River.
- The historic highway/trail (P-19-187085/The Mojave Road) corresponds with Ramona Boulevard, north of I-10.
- The historic railroad is the Southern Pacific Railroad/Union Pacific Railroad (P-19-186112) adjacent to the Garvey Avenue underpass pump station.
- The three transmission/utility lines (P-19-188983/Los Angeles Department of Water and Power Boulder Lines North and South, P-19-190504/Southern California Edison Rio Hondo-Amador-Jose-Mesa-Narrows 66kV Transmission Line, and P-19-186876/Southern California Edison Eagle Rock-Pardee and Antelope-Vincent No.1 220kV Transmission Line Corridor) are along Ramona Boulevard, north of the I-10, and along the I-605/San Gabriel River corridor.

In addition to the above previously recorded resources, the Garvey Avenue underpass pump station is of historic age (50 years or older), as it was constructed in 1934 according to the original plans. It was evaluated for eligibility for listing in the National Register of Historic Preservation (NRHP) for this project by a qualified architectural historian who meets the Secretary of the Interior's Professional Qualifications. The evaluation determined that the pump station is not

NRHP-eligible. The Southern Pacific Railroad/Union Pacific Railroad, (P-19-186112), was not formally evaluated but was part of a reconnaissance survey (CRM Tech 2010), which found that the rail lines had been upgraded and undergone maintenance activities as part of their ongoing use and did not demonstrate historical characteristics.

Given the proximity of the archaeological APE to the San Gabriel River and prehistoric archaeological site P-19-000136/CA-LAN-000136, the archaeological sensitivity of the areas of storm water pipe excavations is evaluated as moderate at present, in the absence of a more detailed sensitivity study.

The California Native American Heritage Commission (NAHC) was consulted about the Garvey Avenue Underpass Project and responded that sacred sites have been identified by the Gabrielino Band of Mission Indians–Kizh Nation as within the project region. EPA is pursuing a concurrent government-to-government consultation with the Soboba Band of Luiseno Indians, as well as seeking and considering the input of the Gabrielino Band of Mission Indians–Kizh Nation, Gabrielino/Tongva San Gabriel Band of Mission Indians, Gabrielino/Tongva Nation, Gabrielino Tongva Indians of California Tribal Council, and Gabrielino/Tongva Tribe.

Based on the information presented above and pursuant to Section 106 of the NHPA, EPA made a determination of “no historic properties affected” for this project. EPA conveyed this finding of effect to the California State Historic Preservation Office (SHPO) in a letter dated August 24, 2016, and the SHPO concurred with this finding on September 21, 2016 (Appendix B). In its letter, SHPO did not object to the identification and delineation of the APE, concurred with the finding that the existing storm drain system is not eligible for listing on the NRHP, and did not object to the finding of “no historic properties affected” for the proposed undertaking.

Air Quality

California is divided into Air Pollution Control Districts and Air Quality Management Districts (AQMD), which are also called air districts. These agencies are county or regional governing authorities that have primary responsibility for controlling air pollution from stationary sources. The City of El Monte is located within the South Coast Air Basin. Its air quality is regulated by EPA Region 9 and California’s South Coast AQMD (SCAQMD).

Criteria Air Pollutants

EPA established primary and secondary National Ambient Air Quality Standards (NAAQS) (Title 40 of the *Code of Federal Regulations* part 50) that specify acceptable concentration levels of six criteria pollutants: particulate matter (measured as both particulate matter less than 10 microns in diameter [PM_{10}] and particulate matter less than 2.5 microns in diameter [$PM_{2.5}$]), sulfur dioxide, carbon monoxide, oxides of nitrogen (NO_x), ozone, and lead. Short-term NAAQS (i.e., 1-, 8-, 24-hour periods) have been established for pollutants contributing to acute health effects, and long-term NAAQS (annual averages) have been established for pollutants contributing to chronic health effects. Each state has the authority to adopt standards more stringent than those established under the federal program. California’s SCAQMD adopted California’s Standards; federal standards also continue to apply.

Federal regulations designate air quality control regions (AQCRs) in violation of the NAAQS as *nonattainment areas*. Federal regulations designate AQCRs with levels below the NAAQS as *attainment areas*. *Maintenance areas* are AQCRs that have previously been designated as nonattainment and have been redesignated to attainment for a probationary period through implementation of maintenance plans.

EPA has designated the portion of Los Angeles County where the action is located as a nonattainment area for lead (through December 31, 2015), $PM_{2.5}$, and ozone, and as a maintenance area for PM_{10} , carbon monoxide and NO_2 . For reference purposes, Table 2 shows the monitored concentrations of criteria pollutants for South Coast Air Basin.

Lead

On February 11, 2014, EPA's Regional Administrator signed a final rule to approve the 2012 Los Angeles County Lead Attainment State Implementation Plan (SIP). The plan was developed and adopted by the SCAQMD, adopted and submitted by the California Air Resources Board, and shows how the area will attain the lead standard by the attainment date of December 31, 2015.

$PM_{2.5}$

On March 15, 2016, EPA finalized action on the South Coast 2012 $PM_{2.5}$ Plan and 2015 Supplement, which address Clean Air Act requirements for the 2006 $PM_{2.5}$ NAAQS. EPA approved the demonstration that the South Coast cannot practicably attain by the Moderate area attainment date of December 31, 2015, and disapproved the following portions of the plan:

- The demonstration that the plan provides for the implementation of reasonably available control measures and reasonably available control technology due to deficiencies in the 2010 version of the area's Regional Clean Air Incentives Market (RECLAIM) included in the plan.
- The demonstration that the plan provides for reasonable further progress.

To correct these deficiencies, California must submit to EPA a demonstration that the $PM_{2.5}$ RECLAIM program, either as adopted in 2010 or as subsequently amended, ensures emissions reductions equivalent in the aggregate to the reductions anticipated from the direct application of reasonably available control technology on covered sources.

Ozone

On August 13, 2014, EPA approved the South Coast 1-Hour ozone attainment demonstration. The revised plan demonstrates attainment of the 1-hour ozone standard in the South Coast area in 2022. Although EPA replaced the 1-hour ozone standard with a more health protective 8-hour standard, the Clean Air Act requires that California have approved plans in place for attaining the 1-hour standard in 1-hour ozone nonattainment areas. EPA noted that air quality has been steadily improving in the South Coast. Since 1985, there have been 95 percent fewer exceedances of the 1-hour ozone standard.

PM_{10}

On June 12, 2013, EPA approved the South Coast PM_{10} redesignation request and maintenance plan. This plan, known as a SIP, is the roadmap to maintaining the 1987 PM_{10} NAAQS set by EPA to protect public health for ten years. The area has not violated the 24-hour PM_{10} standard since 2008.

Carbon Monoxide

On April 24, 2007, EPA approved the South Coast maintenance plan and redesignation request for carbon monoxide. The plan, prepared by the SCAQMD and the California Air Resources Board, shows that the area will have in place the controls necessary to maintain the carbon monoxide standard through the year 2020.

Nitrogen Dioxide

On January 15, 2009, EPA approved in part and disapproved in part the South Coast 2003 1-hour ozone plan and the NO₂ maintenance plan. EPA approved the revised nitrogen dioxide maintenance demonstration based on the downward trend in baseline NO_x emissions. The disapproved portions of the plan were not required by the Clean Air Act.

Table 2.
Air Quality Standards and Monitored Data

		Air Quality Standard	Monitored Concentrations		
Pollutant	Level	Averaging Period	2013	2014	2015
Lead					
Federal					
3-month average (µg/m³)	0.15	Rolling 3-month average	<no data> ^A

µg/m³ = micrograms per cubic meter; ppb = parts per billion; ppm = parts per million

Notes:

^a South Coast Air Basin data were not available for lead for the past three years; however data for the entire state of California during this timeframe indicate that federal and state lead standards were not exceeded.

^b South Coast Air Basin 1-hour maximum and 1-day average nitrogen dioxide data were available for this time frame. The 1-hour maximum nitrogen dioxide values (among stations in the South Coast Air Basin) were 0.1046, 0.1359, and 0.1019 ppm for 2013, 2014, and 2015, respectively. The 1-day average nitrogen dioxide values (maximum among stations in the South Coast Air Basin) were 0.0579, 0.0637, and 0.0602 ppm for 2013, 2014, and 2015, respectively.

^c South Coast Air Basin 1-hour maximum and 1-day average sulfur dioxide data were available for this time frame. The 1-hour maximum sulfur dioxide values (among stations in the South Coast Air Basin) were 0.0219, 0.0154, 0.0375 ppm for 2013, 2014, and 2015, respectively. The 1-day average sulfur dioxide values (maximum among stations in the South Coast Air Basin) were 0.0039, 0.0031, and 0.0046 ppm for 2013, 2014, and 2015, respectively.

^d Data were not available specifically for the South Coast Air Basin. Sulfate data reported for the entire state of California indicated that maximum 24-hour values in the years 2013, 2014, and 2015 were less than the corresponding state standard.

The General Conformity Rule (GCR) applies to the proposed action. The GCR ensures that federal actions comply with the NAAQS. The GCR applies to all federal actions that are taken in designated nonattainment or maintenance areas, with three exceptions. One exception is federal actions with emissions clearly at or below *de minimis* (of minimal importance) levels. Emissions were estimated for a model one-year construction project. Those emissions, which are greater than those expected for the proposed project, would not exceed the *de minimis* thresholds (see Table 3 and Appendix A).

Table 3. Summary of Construction Emissions Estimates							
	Air Pollutants						
	CO	NOx	VOC	SOx	PM ₁₀	PM _{2.5}	CO ₂
<i>De minimis</i> (tons per year) (attainment area/non-attainment or maintenance area)	100/50	100/50	100/50	100/50	100/50	100/50	27,563
Exceeds <i>de minimis</i> threshold?	No	No	No	No	No	No	No

Note: CO – carbon monoxide, SOx – sulfur oxides, VOC – volatile organic compounds.
The CO₂ value includes other greenhouse gases converted to CO₂ equivalents.

Greenhouse Gases and Climate Change

Greenhouse gases (GHGs) are components of the atmosphere that trap heat relatively near the surface of the earth and therefore contribute to the greenhouse effect and climate change. Most GHGs occur naturally in the atmosphere, but increases in their concentration result from human activities, such as the burning of fossil fuels. Global temperatures are expected to continue to rise as human activities continue to add carbon dioxide (CO₂), methane, nitrous oxide, and other greenhouse (or heat-trapping) gases to the atmosphere. Whether rainfall will increase or decrease remains difficult to project for specific regions (EPA 2016). The Council on Environmental Quality (CEQ) released draft guidance on when and how federal agencies should consider GHG emissions and climate change in NEPA analyses. The draft guidance includes a presumptive effects threshold of 27,563 tons per year (25,000 metric tons per year) of CO₂ equivalent emissions from a federal action (CEQ 2010). Emissions were estimated for a model one-year construction project. Those emissions, which are greater than those expected for this smaller project, would not exceed the CEQ threshold (see Table 4 and Appendix A).

Environmental Justice Information

Conditions, Minority & Low Income Areas (include median family income)

Executive Order (EO) 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-income Populations, was issued by President Clinton on February 11, 1994. The EO requires that federal agencies take into consideration disproportionately high and adverse environmental effects of governmental decisions, policies, projects, and programs on minority and low-income populations.

Per CEQ environmental justice guidance, minority populations should be identified where either the minority population of the affected area exceeds 50 percent, or the minority population percentage of the affected area is meaningfully greater than the minority population percentage in the general population or other appropriate unit of geographic analysis (CEQ 1997). The U.S. Census Bureau identifies minority populations as Black or African American; American Indian and

Alaska Native; Asian; Native Hawaiian and other Pacific Islander; persons of two or more races; and persons of Hispanic or Latino origin.

Per CEQ guidance, poverty thresholds established by the U.S. Census Bureau are used to identify low-income populations (CEQ 1997). Poverty status is reported as the number of persons or families with income below a defined threshold level. As of 2014, the U.S. Census Bureau defined the poverty threshold level as \$12,071 or less annual income for an individual and \$24,008 or less annual income for a family of four (U.S. Census Bureau 2015).

The EJSCREEN was used for this environmental justice analysis to identify minority and low-income populations. EJSCREEN is an environmental justice mapping and screening tool developed by EPA (and available on the internet) to provide a nationally consistent dataset and approach that combines environmental and demographic indicators in maps and reports (EPA 2015). Using the tool, a one-mile radius was drawn around the proposed Garvey Avenue underpass project site, generating a report on the populations within this boundary. The report, which is provided in Appendix A, shows the boundary map and lists selected demographic and environmental indicators within the defined boundary, as well as provides the state, regional, and national averages for each indicator for comparison.

The EJSCREEN report for demographic indicators shows that within the defined project boundary the population is comprised of 97 percent of persons of a minority race or ethnicity, which is higher compared to the state average of 60 percent, the EPA regional average of 57 percent, and the United States average of 36 percent. The percent of the population within the defined project boundary identified as low income (i.e., living below the poverty threshold) is 63 percent, higher than the state average of 35 percent, the EPA regional average of 35 percent, and the United States average of 34 percent. The indicators for those linguistically isolated or with less than a high-school education is higher for the project area compared to the state, EPA region, and United States averages.

Census Maps

Figure 6 provides the census maps highlighting the project area.

Land Use & Development, Percent Impervious Cover, Pollutant Sources

The existing land use within the project area is primarily commercial along Garvey Avenue, residential and commercial along Maxson Road, commercial along Durfee Avenue, industrial along Clora Place, and institutional along Gilman Road (City of El Monte 2011). A middle school is along Gilman Avenue next to the San Gabriel River.

Identification of Floodplains and Wetlands

As shown in Figure 7, no floodplains are in or near the proposed project area (FEMA 2008). The San Gabriel River abuts the southern edge of the proposed project area and is considered riverine temporarily flooded. As shown in Figure 8, wetlands are not in the proposed project area; however, patches of freshwater forested/shrub wetlands and riverine wetlands exist in the San Gabriel River channel (FWS 2016b).

2. Direct Impacts

The project would be expected to have minor (i.e., less than significant) adverse impacts on air quality, noise, and transportation. The adverse effects would be short term, lasting generally no longer than the duration of the construction phase of the project. No adverse impacts would be

expected on other resource areas. The project would be expected to have beneficial effects on the local economy, the El Monte sewer system, environmental justice, and transportation. Table 4 summarizes the expected environmental and human health effects of the proposed action.

3. Secondary Impacts of Future Growth and Development

This project is not expected to induce future growth and development because it would not increase system capacity or provide water service to currently un-served areas. No secondary impacts of future growth and development are anticipated to affect the project area. The area is nearly 100% developed.

Table 4.
Summary of Potential Environmental Effects

Resource Area	Environmental Effect(s) of Proposed Action	Environmental Effect(s) of No-Action Alternative	Note
Land Use	No effect	No effect	Land use would not be affected by the proposed action.
Climate	No effect	No effect	No change in the local or regional climate would result from implementing the proposed action, and climate change would not have a discernible effect on the project.
Air Quality	Short-term minor adverse effect	No effect	Minor amounts of air pollutants would be emitted during construction. The effects would end upon completion of construction. Dust from vehicles and ground disturbance would be minimized by using dust control best management practices (BMPs), in accordance with SCAQMD guidance.
Noise	Short-term minor adverse effect	No effect	Construction noise would be associated with the project. However, the noise would cease upon completion of construction.
Earth Resources – Topography	No effect	No effect	No topographic changes would result from implementing the proposed action.
Earth Resources – Soils	No effect	No effect	Some soil disturbance would occur during construction. The areas disturbed, however, are highly developed and do not have natural soil profiles. Disturbed areas would be repaved or stabilized after construction, as necessary.
Earth Resources – Geology	No effect	No effect	No changes in the local geology would result from implementing the proposed action.

Table 4.
Summary of Potential Environmental Effects

Resource Area	Environmental Effect(s) of Proposed Action	Environmental Effect(s) of No-Action Alternative	Note
Water Resources – Groundwater	No effect	No effect	Groundwater would be unaffected by the proposed action. No additional demand on groundwater resources would be created from implementing the proposed project. No pollutants would be introduced into groundwater during project implementation.
Water Resources – Surface waters	No effect	No effect	No natural surface waters would be affected by the proposed project.
Water Resources – Wetlands	No effect	No effect	Wetlands in the San Gabriel River would receive additional stormwater runoff, but no long-term changes to the wetlands would be expected.
Water Resources – Floodplains	No effect	No effect	No floodplains would be altered by implementing the proposed action.
Water Resources – Stormwater	No effect	No effect	No increase in the quantity or quality of stormwater would be expected from implementing the proposed action. Stormwater would be rerouted as a result of the proposed action.
Biological Resources – Flora	No effect	No effect	No adverse effects on local flora would result from implementing the proposed action.
Biological Resources – Fauna	No effect	No effect	No adverse effects on local fauna would result from implementing the proposed action.
Biological Resources – Protected species	No effect	No effect	No adverse impacts on protected species would be expected from implementing the proposed action.

Table 4.
Summary of Potential Environmental Effects

Resource Area	Environmental Effect(s) of Proposed Action	Environmental Effect(s) of No-Action Alternative	Note
Cultural Resources	No effect	No effect	No effects on cultural resources would be expected from implementing the proposed action. Consultation with the California SHPO has confirmed this determination. Effects would be further minimized by the use of Native American and archaeological monitors.
Socioeconomics – Economic environment	No effect	No effect	Beneficial effects would be expected on the regional economy. The expenditures and employment associated with the proposed action would increase regional employment, income, and sales volume in the local construction industry and related industries. The economic benefits would be short-term, lasting for the duration of the construction period.
Socioeconomics – Environmental justice	No effect	No effect	Because the proposed action would have no substantially adverse effects, it would not disproportionately affect low-income or minority populations. The short-term effects of the proposed action would affect all populations equally.
Socioeconomics – Protection of children	No effect	No effect	No environmental health risks and safety risks that could disproportionately affect children are associated with the proposed project.
Transportation	Short-term minor adverse effect Long-term minor beneficial effect	No effect	Construction would adversely affect traffic on roads directly affected and on nearby roads indirectly. Traffic on Garvey Avenue would be improved upon completion of the project because it would reduce flooding of that roadway.
Infrastructure and Utilities	Long-term minor beneficial effect	No effect	Stormwater management would improve as a result of implementing the project.

Table 4.
Summary of Potential Environmental Effects

Resource Area	Environmental Effect(s) of Proposed Action	Environmental Effect(s) of No-Action Alternative	Note
Hazardous and Toxic Materials and Waste	No effect	No effect	No hazardous or toxic substances would be transported, used, stored, or disposed of during project implementation. Any lubricants, oils, or petroleum products used would be those only for normal equipment operation and maintenance.
Safety and Occupational Health	No effect	No effect	No change in safety or occupational health would result from implementing the proposed action. All contractors would be required to comply with normal industry standards of safety or occupational health during project implementation, and the public would be excluded from or routed around the project area during construction.

4. Cumulative Impacts

Cumulative effects on environmental resources result from the incremental effects of an action when combined with other past, present, and reasonably foreseeable future projects in the area. Cumulative effects can result from individually minor but collectively substantial actions taken over a period of time. In accordance with NEPA, a discussion is required of cumulative effects that could result from projects proposed or anticipated in the foreseeable future.

Cumulative effects are possible for those resource areas on which the project could have an adverse effect. The El Monte proposed project could have an adverse effect on air quality, noise, and transportation. Cumulative impacts on air quality from construction activities cause temporary increases in air pollutants. Once construction is completed, emissions return to baseline levels. Therefore, construction projects may cause short-term, but do not cause long-term cumulative impacts on air quality. The magnitude of the short-term impact, if any, would depend on whether other projects in the region were active at the same time as the proposed project and the nature of the projects.

Construction noise is generally loud enough to be annoying within 800 feet from the construction site. If another source of loud noise is within 1,600 feet of the construction site, the two noise sources can overlap. In the case of this project, cumulative noise impacts would be expected to be negligible because of the urban nature of the project area, with continuous road traffic and intermittent train traffic.

Cumulative impacts on the transportation network would be expected if road closures and detours for other projects occur in the same area and during the same time as those for this proposed project. The timing of the project has not been determined, so cumulative impacts on the transportation network cannot be determined at this time. The Town of El Monte Public Works Department would schedule road closures and plan detours to minimize adverse effects on the transportation network.

5. Unavoidable Adverse Impacts

Unavoidable adverse impacts from the project include the following:

- Short-term traffic flow delays and interruptions.
- Short-term air quality emissions from construction activities and equipment.
- Short-term noise during construction.

6. Minimization of Adverse Impacts

If the proposed project disturbs 1 acre or more of total area, the construction contractor would obtain a 2009-0009-DWQ Construction General Permit (General Permit No. CAS000002 Storm Water Discharges Associated with Construction and Land Disturbance Activities) in compliance with the requirements of the California State Water Resources Control Board, Division of Water Quality. Implementing the conditions of the permit, including preparation of a stormwater pollution prevention plan that incorporate best management practices accepted by California's State Water Resources Control Board, would minimize sediment runoff from the site.

7. Mitigation

Compliance with applicable construction activity controls (e.g., dust control during construction/demolition activities, construction equipment maintained to minimize emissions)

included in the SIPs and Maintenance Plans for the SCAQMD is required to minimize air quality issues.

SCAQMD Rule 403 (Fugitive Dust) is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (man-made) fugitive dust sources by requiring actions to prevent, reduce or mitigate fugitive dust emissions (SCAQMD 2016). Under the rule, dust suppression is to be applied in sufficient quantity and frequency to maintain a stabilized surface. Any areas which cannot be stabilized, as evidenced by wind driven fugitive dust must have an application of water at least twice per day to at least 80 percent of the unstabilized area.

The California Code of Regulations requires that construction equipment idling time be minimized either by shutting equipment off when not in use or reducing the time of idling to 5 minutes (Title 13 Sections 2449(d)(3), 2485) (SAQMD 2010). All construction equipment should be maintained in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determine to be running in proper condition before it is operated.

To avoid impacts on subsurface cultural resources, a Native American monitor and archaeological monitor would be present during ground-disturbing activities. Each monitor would be empowered to halt project activities to avoid or minimize disturbance of Native American or archaeological resources.

Should any known or potential cultural materials be encountered during ground-disturbing activities, all work that may affect those materials would be halted until a qualified archaeologist can be consulted on the nature and significance of those materials.

8. Cross-cutter Environmental Laws and Coordination and Consultation Process

Archeological and Historic Preservation Act

EPA made a determination of "no historic properties affected" for this project. EPA conveyed this finding of effect to the California SHPO in a letter dated August 24, 2016, and the SHPO concurred with this finding on September 21, 2016 (Appendix B). In its letter, SHPO did not object to the identification and delineation of the APE, concurred with the finding that the existing storm drain system is not eligible for listing on the NRHP, and did not object to the finding of "no historic properties affected" for the proposed undertaking.

Clean Air Act

Under the GCR in the Clean Air Act, air emissions attributable to the project will be required to be in compliance with the SIP and Los Angeles County Maintenance Plan for air quality.

Coastal Barrier Resources Act

The proposed project would not affect coastal barrier resources. No coastal barrier resources are within the project area.

Coastal Zone Management Act

The proposed project would not affect the California coastal zone. El Monte is not within the California coastal zone.

Endangered Species Act

No federally listed species would be affected by the proposed project. The U.S. Fish and Wildlife Services' (USFWS) IPaC (*Information for Planning and Conservation*) website (<https://ecos.fws.gov/ipac/>) was searched for protected species information specific to the proposed project area. The project area has no habitat suitable for the federal species listed as potentially occurring in the project area. The results of this search are provided in Appendix C.

Environmental Justice

Because the proposed action would have no substantially adverse effects, it would not disproportionately affect low-income or minority populations. The proposed action would affect all populations equally.

Floodplain Management

Because no floodplains exist in the project area, they would not be affected by the proposed project.

Protection of Wetlands

No effects on wetlands in the San Gabriel River would be expected. Stormwater formerly directed to the Rio Hondo Channel would be diverted to the San Gabriel River, resulting in increased stormwater runoff to the river and its wetlands. Freshwater forested/shrub wetlands and riverine wetlands are in the river channel at the proposed outfall location at the end of Line A. Because stormwater peak flow subsides quickly after a storm event, it would not be expected that the additional flow would be substantial enough to alter the wetlands in the river.

Farmland Protection Policy Act

Because no farmlands exist in the project area, farmland would not be affected by the proposed project (NRCS 2014).

Fish and Wildlife Coordination Act

Fish and wildlife would not be affected by the proposed project. The urban environment of the project area contains no natural habitat for any fish or wildlife species.

National Historic Preservation Act

Pursuant to Section 106 of the NHPA, EPA made a determination of "no historic properties affected" for this project. EPA conveyed this finding of effect to the California SHPO in a letter dated August 24, 2016, and the SHPO concurred with this finding on September 21, 2016 (Appendix B). In its letter, SHPO did not object to the identification and delineation of the APE, concurred with the finding that the existing storm drain system is not eligible for listing on the NRHP, and did not object to the finding of "no historic properties affected" for the proposed undertaking.

Safe Drinking Water Act

Drinking water supplies would not be affected by the proposed project.

Wild and Scenic River Act

No wild and scenic rivers exist in the project area. Wild and scenic rivers would not be affected by the proposed project (BLM 2016).

Essential Fish Habitat

Because no essential fish habitat exists in the project area, that habitat type would not be affected by the proposed project (NOAA 2016).

EJ Index for the Selected Area Compared to All People's Block Groups in the State/Region/US

This report shows environmental, demographic, and EJ indicator values. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports.

*The National-Scale Air Toxics Assessment (NATA) environmental indicators and EJ indexes, which include cancer risk, respiratory hazard, neurodevelopment hazard, and diesel particulate matter will be added into EJSscreen during the first full public update after the soon-to-be-released 2011 dataset is made available. The National-Scale Air Toxics Assessment (NATA) is EPA's ongoing, comprehensive evaluation of air toxics in the United States. EPA developed the NATA to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that NATA provides broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. More information on the NATA analysis can be found at: <https://www.epa.gov/national-air-toxics-assessment>.

For additional information, see: www.epa.gov/environmentaljustice

EJSscreen is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSscreen documentation for discussion of these issues before using reports. This screening tool does not

provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJScreens outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.

San Francisco, California 94105-3901

RE: Section 106 Consultation Regarding U. S. Environmental Protection Agency's Special Appropriation Act Projects Grant Funding for the City of El Monte's Garvey Avenue Underpass Drainage Improvement Project; Los Angeles County (your letter of August 24, 2016)

Dear Mr. Kahan:

The U. S. Environmental Protection Agency (EPA) is initiating consultation on the above cited undertaking, in accordance with Section 106 of the *National Historic Preservation Act of 1966* (16 U.S.C. §306108) as amended, and its implementing regulations found at 36 CFR Part 800. On September 21, 2016, Duane Marti (of my staff) and you had a telephone call in which you discussed the proposed undertaking and provided clarifying information about it.

The City of El Monte (City) is proposing to reconstruct the existing Garvey Avenue Underpass storm drain which was originally constructed in 1934. The proposed undertaking would involve the construction of two new storm drain lines (Lines A and B) and a new storm water pump station at the Garvey Avenue underpass. Line A will be located within the rights-of-way of three urban streets and be approximately 1,271 feet long and Line B will be located within the rights-of-way of two urban streets and be approximately 2,840 feet long. The new pump station will replace the existing pump station and the existing storm drain lines will be abandoned in place. The infrastructure of the existing storm drain system was evaluated by EPA for its eligibility for listing on the National Register of Historic Places (NRHP) and it was determined to be ineligible.

The area of potential effects (APE) contains the elements described above. The APE is located in the southeastern portion of the City and the APE is an urban setting containing streets, commercial buildings, Madrid Middle School, and residential housing. The APE is bounded on the north by Interstate 10 (San Bernardino Freeway) and on the east by the San Gabriel River, which has been channelized.

As documentation for your finding of effect, EPA conducted a records review at the South Central Coastal Information Center at CSU-Fullerton. That records review: (1) identified no cultural resources as being located with the APE; (2) identified 39 previous cultural resources surveys which had been conducted within a one mile radius of the APE, but none of which included the APE; and (3) identified 18 cultural resources as being located within a one mile radius of the APE. None of those cultural resources will be affected by the proposed undertaking. EPA did not require a pedestrian survey of the APE because of the urban setting of the APE.

P-19-000136/CA-LAN-000136 is a prehistoric habitation site with burials located approximately 0.8 mile southeast of the APE and on the opposite side of the San Gabriel River. Given the

proximity of the APE to this site and the river, EPA has determined the archaeological sensitivity of the APE to be moderate. The site will not be affected by the proposed undertaking.

Native American consultation included contacting the American Heritage Commission (NAHC) on April 27, 2016 and requesting a record search of their sacred land file. The NAHC responded that their search did indicate the presence of Native American cultural resources in the APE. EPA sent request for comment letters to the ten Native American contacts provided by NAHC. EPA received the following response to those letters:

- EPA discussed the proposed undertaking with Andy Salas, Chairman, Gabrieleno Band of Mission Indians – Kizh Nation, who stated the APE was culturally sensitive and requested that Native American monitors be used during ground disturbing activities.

Based on the records review, the tribal consultation, and the above described conditions, EPA has determined that a finding of No Historic Properties Affected is appropriate for the proposed undertaking. EPA has requested me to review and comment on their identification of the APE and their finding of No Historic Properties Affected for the proposed undertaking.

After reviewing the information submitted with your letter, I offer the following comments:

- I have no objections to your identification and delineation of the APE, pursuant to 36 CFR Parts 800.4(a)(1) and 800.16(d);
- I concur with your determination that the infrastructure of the existing storm drain system is not eligible for listing on the NRHP; and
- I do not object to your finding of No Historic Properties Effected for the proposed undertaking, as described above.

Be advised that under certain circumstances, such as an unanticipated discovery or a change in project description, you may have additional future responsibilities for this undertaking under 36 CFR Part 800. Should you encounter cultural artifacts during ground disturbing activities, please halt all work until a qualified archaeologist can be consulted on the nature and significance of such artifacts.

Thank you for seeking my comments and considering historic properties as part of your project planning. If you have any questions or concerns, please contact the following member of my staff: Tristan Tozer at (916) 445-7027 or via e-mail at Tristan.Tozer@parks.ca.gov.

Sincerely,

Julianne Polanco
State Historic Preservation Officer

Sacramento, California 95816

Subject: Section 106 Consultation Regarding the U.S. Environmental Protection Agency
Special Appropriation Act Projects Grant Funding of the City of El Monte's Garvey
Avenue Underpass Drainage Improvement Project

Dear Mr. Tozer:

The City of El Monte, California, was authorized to receive a Special Appropriation Act Project for the Garvey Storm Drain reconstruction project in Fiscal Year 2009. The Garvey Grade Underpass is located in the southeastern area of El Monte, adjacent to the neighboring cities of Baldwin Park and the City of Industry (see Enclosure 1).

Storms regularly flood Garvey Avenue where the street passes under the Southern Pacific Railroad at the Garvey Avenue underpass. The existing stormwater pumps and conveyance pipes that drain the underpass are inadequate to effectively convey stormwater from the street's surface to the intended storm drainage facilities. The existing Garvey Avenue underpass pump station was constructed in 1934, and surrounding land use has changed over the past 82 years. The pumps were replaced within the last 10 years, but the capacity of the pump station is still inadequate to handle the stormwater load at the Garvey Avenue underpass from minor and major storm events. The project will also reduce movement of nonpoint source pollutants and contaminants in the City of El Monte.

This letter initiates the U.S. Environmental Protection Agency's (EPA) consultation with your office for this funding (the undertaking) under Section 106 of the National Historic Preservation Act (NHPA). It also documents the measures that EPA proposes to take to comply with the substantive requirements of Section 106 and its implementing regulations at 36 Code of Federal Regulations (CFR) Part 800. EPA has (1) described the proposed undertaking; (2) defined the Area of Potential Effects (APE) for the undertaking; and (3) provided data on identification of historic properties.

EPA is concurrently completing efforts associated with the National Environmental Policy Act (NEPA). As part of the NEPA process, EPA is preparing a draft environmental information document (EID) to evaluate the impacts of the proposed project.

Description of the Undertaking

The Garvey Avenue underpass is located in the southeastern area of El Monte, adjacent to the neighboring cities of Baldwin Park and the City of Industry, and separates traffic on Garvey Avenue from the Southern Pacific Railroad tracks. Rain storms flood the underpass, showing that the existing drainage facilities are inadequate to effectively convey the volumes of stormwater received.

The existing Garvey Avenue underpass pump station was constructed in 1934, after construction of the Garvey Avenue underpass in 1933. The pumps in the building were replaced within the last 10 years and consist of a 6-foot by 9-foot, 4-inch concrete sump with two submersible pumps. The pumps have a combined capacity of 1,400 gallons per minute (gpm), but the pump station is still inadequate to handle the stormwater load at the Garvey Avenue underpass from minor and major (100-year) storm events. The pumps convey water from the grade separation into a catch basin on the corner of Garvey Avenue and Valley Boulevard, which then drains into a City of El Monte storm drain system along Valley Boulevard that conveys water flow to the Rio Hondo Channel. This configuration has proven deficient and needs to be realigned.

In addition, three existing 24-inch culverts northeast of the Garvey Avenue underpass convey stormwater from Exline Street, under Interstate 10 (the I-10), and to outlets on Maxson Road. Surface drainage from that point is deficient and needs to be intercepted with a new storm drain.

The city's project will consist of two new storm drain lines and a new storm water pump station at the Garvey Avenue underpass. The city will discontinue using the existing pump housed in the historic-age Garvey Avenue Grade Underpass pump station. The city plans to use a new pump station that includes three 9,000-gpm pumps and one 2,200-gpm pump. A new storm drain line (Line A) will run from the I-10 south on Maxson Road, then east on Garvey Avenue, then south on Durfee Avenue, and finally discharge to the existing storm Durfee storm drain. The second new storm drain line (Line B) will parallel Line A along Durfee Avenue, but will extend beyond Line A to continue along Stoddard Way to the San Gabriel River. No existing storm drain lines will be removed. Anticipated maximum dimensions of excavations for Lines A and B are summarized in Table 1 below.

Table 1. Garvey Avenue Underpass Drainage Improvement Project Storm Drain Excavations

Line Section	Length of Excavation	Width of Excavation	Depth of Excavation
Line A			
Maxson Road and Garvey Avenue	931 feet	28 feet	7 feet
Durfee Avenue	340 feet	28 feet	8 feet
Line B			
Durfee Avenue	540 feet	23 feet	10-13 feet
Stoddard Way	2,300 feet	30 feet	13-16 feet

Staging areas have not yet been identified. The city anticipates that staging areas will be located to avoid public rights-of-way during construction. The city also anticipates that these areas most likely will be in paved parking lots and along the streets involved in the project.

Area of Potential Effect

To comply with the substantive requirements of Section 106 of the NHPA, EPA has defined the archaeological APE as the surfaces and depths that would be disturbed by excavation and storm drain installation, as well as the footprint of the Garvey Avenue underpass pump station building. This APE includes 931 feet of new storm drain pipe excavation along Maxson Road and Garvey Avenue, 540 feet along Durfee Avenue, and 2,300 feet along Stoddard Way (see Table 1) in the City of El Monte. Excavations range from 23 to 30 feet wide and 7 to 16 feet deep.

The historical architectural APE is the pump station and the pipes and culverts that may be replaced that are 50 years or older. These elements, if eligible for the National Register of Historic Places (NRHP), could be impacted with replacement of original materials as well as with introduction of modern construction. It is noted that the railroad bridge adjacent to the Garvey Avenue Grade Underpass pump house and adjacent to the project was constructed more than 50 years ago.

Staging areas would be limited to paved parking lots and areas along the APE and outside of the public right-of-way.

No undertaking-related activities would occur outside of the APE. Enclosure 2 depicts the horizontal APE.

Identification of Historic Properties

EPA conducted a records search of the archaeological APE and surrounding areas via the South Central Coastal Information Center (SCCIC) of the California Historical Resources Information System (CHRIS) (Records Search File No.: 16371.2401). The study area for the records search included a 1-mile buffer centered on the APE of the new storm drains. Enclosure 3 provides the results of the CHRIS records search. No part of the APE has been previously surveyed, and no resources have been recorded within the APE. However, 39 surveys have been conducted within the study area, and 18 resources have been recorded in the same area.

The 39 surveys conducted within the study area were completed between 1969 and 2012. (One of the surveys was undated.) The majority of surveys were conducted adjacent to the eastern extent of the APE, along the San Gabriel River/I-605 corridor. Additional surveys are primarily concentrated along the I-10, at the northern extent of the APE, and at the Southern Pacific Railroad, adjacent to the pump station.

The following 18 resources previously recorded within the study area include one prehistoric archaeological site, 11 historic buildings, one historic district, one historic highway/trail, one historic railroad, and three historic transmission/utility lines, which are detailed below:

- The prehistoric archaeological site (P-19-000136/CA-LAN-000136) is a habitation with burials located approximately 0.8 mile southeast of the APE on the opposite side of the San Gabriel River.
- The historic buildings (P-19-188913, P-19-188914, P-19-188915, P-19-188916, P-19-188917, P-19-188918, P-19-188919, P-19-188921, P-19-188922, P-19-188923, and P-19-188924) are concentrated approximately 0.85 mile northeast of the APE in Baldwin Park, on the opposite side of Interstate I-605 (the I-605) and the San Gabriel River.
- The historic district, consisting of the Woodland Duck Farms and Equestrian Center/Louise A. Ward Residence (P-19-004079/CA-LAN-004079H), is located

approximately 0.35 mile southeast of the APE on the opposite side of the San Gabriel River.

- The historic highway/trail (P-19-187085/The Mojave Road) corresponds with Ramona Boulevard, north of the I-10, and is approximately 0.75 mile north of the APE.
- The historic railroad is the Southern Pacific Railroad/Union Pacific Railroad (P-19-186112) adjacent to the Garvey Avenue underpass pump station.
- The three transmission/utility lines (P-19-188983/Los Angeles Department of Water and Power Boulder Lines North and South, P-19-190504/Southern California Edison Rio Hondo-Amador-Jose-Mesa-Narrows 66kV Transmission Line, and P-19-186876/Southern California Edison Eagle Rock-Pardee and Antelope-Vincent No.1 220kV Transmission Line Corridor) are located along Ramona Boulevard, north of the I-10, and at the eastern extent of the APE, along the I-605/San Gabriel River corridor.

In addition to these previously recorded resources, the Garvey Avenue underpass pump station is of historic age (50 years or older), as it was constructed in 1934, according to the original plans. It was evaluated for eligibility for listing in the NRHP for this project by a qualified Architectural Historian who meets the Secretary of the Interior's Professional Qualifications. The Department of Parks and Recreation (DPR) 523 A and B forms are included as Enclosure 4. It was determined that the pump station is not recommended to be eligible for listing in the NRHP.

The Southern Pacific Railroad/Union Pacific Railroad, P-19-186112, was not formally evaluated but was part of a reconnaissance survey (CRM Tech 2010). Field observations indicated that the rail lines had been upgraded and undergone maintenance as part of their ongoing use and did not demonstrate historical characteristics. The 2010 letter report is Enclosure 5.

Given the proximity of the archeological APE to the San Gabriel River and prehistoric archaeological site P-19-000136/CA-LAN-000136, the archaeological sensitivity of the areas of stormwater pipe excavations is evaluated as moderate at present, in the absence of a more detailed sensitivity study.

The California Native American Heritage Commission (NAHC) was consulted about the Garvey Avenue Underpass Project and responded that sacred sites have been identified by the Gabrielino Band of Mission Indians–Kizh Nation as within the project region. Enclosure 6 provides a copy of the NAHC's response letter. The NAHC recommended that EPA contact the Gabrielino Band of Mission Indians–Kizh Nation to determine if the undertaking will affect this resource.

The only cultural resource survey that has been conducted for the undertaking is the recordation and evaluation of the Garvey Avenue underpass pump station, which the city states must be demolished to accommodate the new pumps.

Discussions with Tribal Representatives

EPA sent letters to the Soboba Band of Luiseno Indians, Gabrielino Band of Mission Indians–Kizh Nation (as described above), Gabrielino/Tongva San Gabriel Band of Mission Indians, Gabrielino/Tongva Nation, Gabrielino Tongva Indians of California Tribal Council, and Gabrielino/Tongva Tribe on June 8, 2016. The goal of the letters were to identify any issues or concerns regarding this proposed project including information regarding potential impacts on cultural resources or areas of traditional cultural importance. EPA did not receive any responses to the letters sent to the tribal representatives. EPA held a phone conversation with Mr. Andy Salas, chairman of the Gabrielino Band of Mission Indians–Kizh Nation to discuss the proposed project. Mr. Salas recommended that a Native American monitor from the Gabrielino Band of Mission Indians be present during excavation activities of the proposed

project. Mr. Salas described that his tribe traditionally used the areas. The EPA notes from the phone call can be found in Enclosure 7.

Planned Actions Prior to Finding of Effect

The new pipelines are anticipated to require excavations into undisturbed soils in an area considered moderately sensitive for archaeological resources.

Given the underground nature of the storm water pipeline component of the project and distance to the previously recorded built-environment resources, the new storm pipes are not anticipated to adversely affect any of the previously recorded resources. Construction of the reconstructed pump station building adjacent to the Southern Pacific Railroad (P-19-186112) would place a new, modern element within the viewshed of the resource; however, this impact is not anticipated to be adverse, given the existing developed nature of the viewshed in 2010 and the fact that the rail line was surveyed and observed to be altered.

Based on the 2010 railroad survey findings and other information presented above and pursuant to Section 106 of the NHPA, EPA has made a determination of "no historic properties affected" for this undertaking. EPA is recommending that a Native American monitor be present during all ground disturbing activities. If archaeological resources are identified during excavation, it could result in an adverse effect and consultation with SHPO would resume.

Please provide any comments or concerns that you have regarding the project and EPA's planned actions within 30 days. EPA will consider any comments or concerns received and provide formal responses to comments. Given the schedule associated with the project, EPA plans to proceed with the planned actions and determination of effect after 30 days from the confirmed receipt of this correspondence, if no objections are received.

If you have questions, or comments, please contact me at:

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System,

Lindsey Noyes
Lead Staff Researcher

South side of Garvey Avenue, under the Garvey Avenue Grade Underpass

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The pump station is at the south side of Garvey Avenue, adjacent to a railroad bridge. It is situated on a steep concrete slope and rests on a tall, concrete foundation approximately eight feet above the sidewalk (Photographs 1 and 2). The station is approximately four feet by eight feet in length with exterior walls made of concrete masonry units. It is topped with a low gabled roof covered in corrugated metal. It is accessed by a door at street level set into the concrete foundation; a second metal door is located at the south side of the building's upper level (See Continuation Sheet).

CONTINUATION SHEET

Property Name: Garvey Avenue Pump Station
Page 3 of 6

P3a. Description (Continued)

A concrete staircase with metal rail leads up the slope to the south elevation of the building. At the top of the slope, on the south side of the pump station is an approximately three-foot tall concrete masonry unit structure attached to the pump station. It has three wood beams covering its top and several metal pipes at the south elevation (Photograph 3). The station has a six-foot by nine-foot concrete sump with two submersible pumps. The pumps have a capacity of 1,400 gallons per minute each and pump water from the underpass into a catch basin on the corner of Garvey Avenue and Valley Boulevard. The stormwater then flows to the City of El Monte storm drain system along Valley Boulevard and discharges to the Rio Hondo Channel.^A

B10. Significance (Continued)

Historic Context—Brief History of the City of El Monte

The pump station is in the City of El Monte, which was incorporated in 1912. The area was first inhabited by Native American settlers, the Gabrielino (Tongva) people, who lived near the Rio Hondo River banks. During the Mission period, the Spanish established Mission San Gabriel in 1771 and called the area El Monte, *the wooded place*. Wagon trains came to the township known as Camp El Monte in the 1850s, as it was located at the end of the Santa Fe Trail, a commercial highway that connected Missouri with Santa Fe, New Mexico. During the Gold Rush, many people on their way to Northern California from the eastern portion of the country, hoping to strike it rich in the El Dorado foothills, stopped in Camp El Monte to rest and some returned after their stint in the gold country. El Monte's trees, meadows, Rio Hondo and San Gabriel Rivers, made it a desirable location for farming and agriculture. In 1853, 6,000 acres were set aside for the township by the Los Angeles County Board of Supervisors.^B

By the 1930s, El Monte was experiencing an increase in settlement by people interested in establishing small subsistence farms on which to live. A 1934 Los Angeles Times article reported that approximately 3,000 residents had settled in El Monte on small plots of land prior to 1933, and at least six hundred El Monte families were growing their own fruits and vegetables on small farm plots.^C Orchards abounded in the area. Also in 1933, El Monte was chosen as one of the cities for the New Deals' Federal Subsistence Homestead Project, a Resettlement Administration Program that provide single-family ranch style houses to applicants who qualified. One hundred residential units were constructed in El Monte under this program.^D Agriculture remained the center of El Monte's economy through the early twentieth century with walnut, citrus, other fruit orchards, and vegetable fields in abundance.

CONTINUATION SHEET

Property Name: Garvey Avenue Pump Station
Page 4 of 6

B10. Significance (Continued)

In the early 1870s, the Southern Pacific Railroad constructed tracks through El Monte. Population began to increase in the 1930s and exploded with the start of World War II, when aircraft factories opened in town. The number of farms decreased as residents turned from agriculture to industrial jobs.^E After World War II, El Monte continued to experience a shift from agriculture to manufacturing and technology as suburbanization took hold in the region. The area also responded to Cold War industry demands. During this period, large-scale Asian American and Mexican American residents settled in El Monte and the general San Gabriel Valley, vastly expanding the existing small populations of these groups.

Garvey Avenue was constructed sometime between 1933 and 1937 as a major east-west route through El Monte. In 1937, shortly after Garvey Avenue opened, the daily traffic load was 10,000 vehicles per day. Garvey Avenue was constructed to reduce the traffic loads on other east-west routes in the area, as well as other roads experiencing heavy traffic due to increasing population and travel to and from the suburbs of the San Gabriel Valley to downtown Los Angeles.^F

History of Water and Flooding in El Monte

El Monte is bounded by the Rio Hondo and San Gabriel Rivers, which meet at the Whittier Narrows, a gap in the mountains of the southern edge of the San Gabriel Valley where bedrock below the ground forces groundwater up to the surface. This natural water supply, in addition to torrential rains and storms that occur in Southern California, has historically provided the El Monte area with an abundance of water and created an ideal agricultural environment. During the 1910s through the 1930s, destructive torrential storms hit Southern California, including El Monte, and caused extensive flooding that resulted in the need for flood control infrastructure in the Los Angeles basin. The destruction caused by a flood in 1914 strengthened the demand for flood control. The State Legislature adopted The Los Angeles County Flood Control Act in 1915, which created a flood control district that began a series of measures to curb the San Gabriel River's overflow into channels that would move large quantities of water out to the sea. Steep mountains that surround the region also add to the flooding problem. The winter of 1933 brought heavy rainfall for two weeks in the Los Angeles area in which approximately 14 feet of rain fell within 50 hours. The normal rainfall for the entire season in that period was 15 inches.^G A timber bridge over Garvey Avenue was washed out during this storm. The director of Public Works at the time, Earl Lee Kelly, was put in charge of the state's flood relief and of local rehabilitation. The public was concerned that storms would severely damage the state's important transportation infrastructure, particularly highways. Even after channels were constructed to divert water, Southern California, including the City of El Monte, continued to experience flooding when large storms that brought vast quantities of rain.

CONTINUATION SHEET

Property Name: Garvey Avenue Pump Station
Page 5 of 6

B10. Significance (Continued)

The Garvey Avenue pump station, and the stormwater pipeline system adjacent to it, were constructed in 1934 by the Department of Public Works, Division of Highways, in an effort to reduce flooding in El Monte and the surrounding area. At approximately the same time the Garvey Avenue pump station was constructed, a railroad grade at Garvey Avenue was built as part of the California Division of Highway's plan to improve transportation by constructing grade separations. A reinforced concrete girder and deck bridge was constructed across the San Gabriel River as a railroad crossing for the Southern Pacific Railroad. Traffic proceeded under the bridge along Garvey Avenue.^H The bridge over Garvey Avenue and adjacent to the pump station remains in use. These improvements of the highway and roadway in creating grade separations for railroad and street and interstate highway intersections were part of large contracts and were well-publicized by the California Highways and Public Works for improving safety at busy intersections throughout the state. The Garvey Avenue pump station and its related pump and channel system was constructed during this period of improvement for highways and roads to address the flooding that occurred along this roadway during severe storms. Plans for the underpass pump station show it was designed by the Department of Public Works, Division of Highways, the same agency that constructed the Southern Pacific Railroad bridge underpass.^I

Evaluation

The pump station is not recommended eligible for listing in the NRHP under Criterion A because it is not associated with events significant to national, state, and local history. Although the construction of the pump station is associated with the period of construction of infrastructure to control flooding in Southern California and the San Gabriel Valley, the historic record does not indicate that it was importantly associated with the events during that period.

The pump station is not associated with important individuals significant to our past (Criterion B). No important individual significant to local, state, or national history is associated with the pump station; therefore, it is not recommended eligible for listing in the NRHP under Criterion B.

The pump station is not significant as an important example of a type, period, or method of construction, does not represent the work of a master, nor does it possess high artistic values. It is an example of an unadorned, utilitarian building that houses pumps and equipment for water conveyance, similar to many pump stations constructed in Southern California during this period. It is not recommended eligible for listing in the NRHP under Criterion C.

In rare instances, buildings themselves can serve as sources of important information; however, this building is not a principal source of important information in this regard and is not recommended eligible for listing under Criterion D.

While the pump station retains historic integrity of location, setting, design, materials, workmanship, feeling, and association, it lacks historic significance, and as such, does not appear to meet any of the four criteria for listing in the NRHP.

Re: Preliminary Historical / Archaeological Resources Study
San Bernardino Line Positive Train Control Project
Southern California Regional Rail Authority
Counties of Los Angeles and San Bernardino
CRM TECH Contract No. 2446

Dear Ms. Gatchel-Evans:

At your request, CRM TECH has completed a preliminary historical / archaeological resources study for the Southern California Regional Rail Authority's (SCRRA) proposed San Bernardino Line Positive Train Control (PTC) Project. The project's Area of Potential Effects (APE) consists of 56.2 miles of railroad right-of-way beginning at Los Angeles Union Station [Mile Post 0] in the City of Los Angeles and extending eastwards through the San Gabriel and San Bernardino Valleys before terminating at the former Santa Fe Depot [Mile Post 56.2] in the City of San Bernardino (Figs. 1a, 1b).

The study is a part of the environmental review process for the project, as required by the lead agency, namely the SCRRA, and was conducted in preparation for future project review under Section 106 of the National Historic Preservation Act and the California Environmental Quality Act (CEQA). The purpose of the study is to review past survey coverage of the APE, inventory previously recorded historical / archaeological sites located within or partially within the APE for future statutory / regulatory compliance considerations, and assess the APE's potential for as-yet undocumented historical / archaeological resources.

The scope of the study included a historical / archaeological records search, a preliminary historical background research, a field reconnaissance along the entire length of the project route, and contacts with Native American representatives. A brief summary of the methods and results of these research procedures is presented below.

RECORDS SEARCH

CRM TECH archaeologist Nina Gallardo (see App. 1 for qualifications) conducted the historical / archaeological resources records search at the South Central Coastal Information Center (SCCIC) at California State University, Fullerton, on May 5, 2010, and at the Archaeological Information Center (AIC), San Bernardino County Museum, Redlands, on May 10.

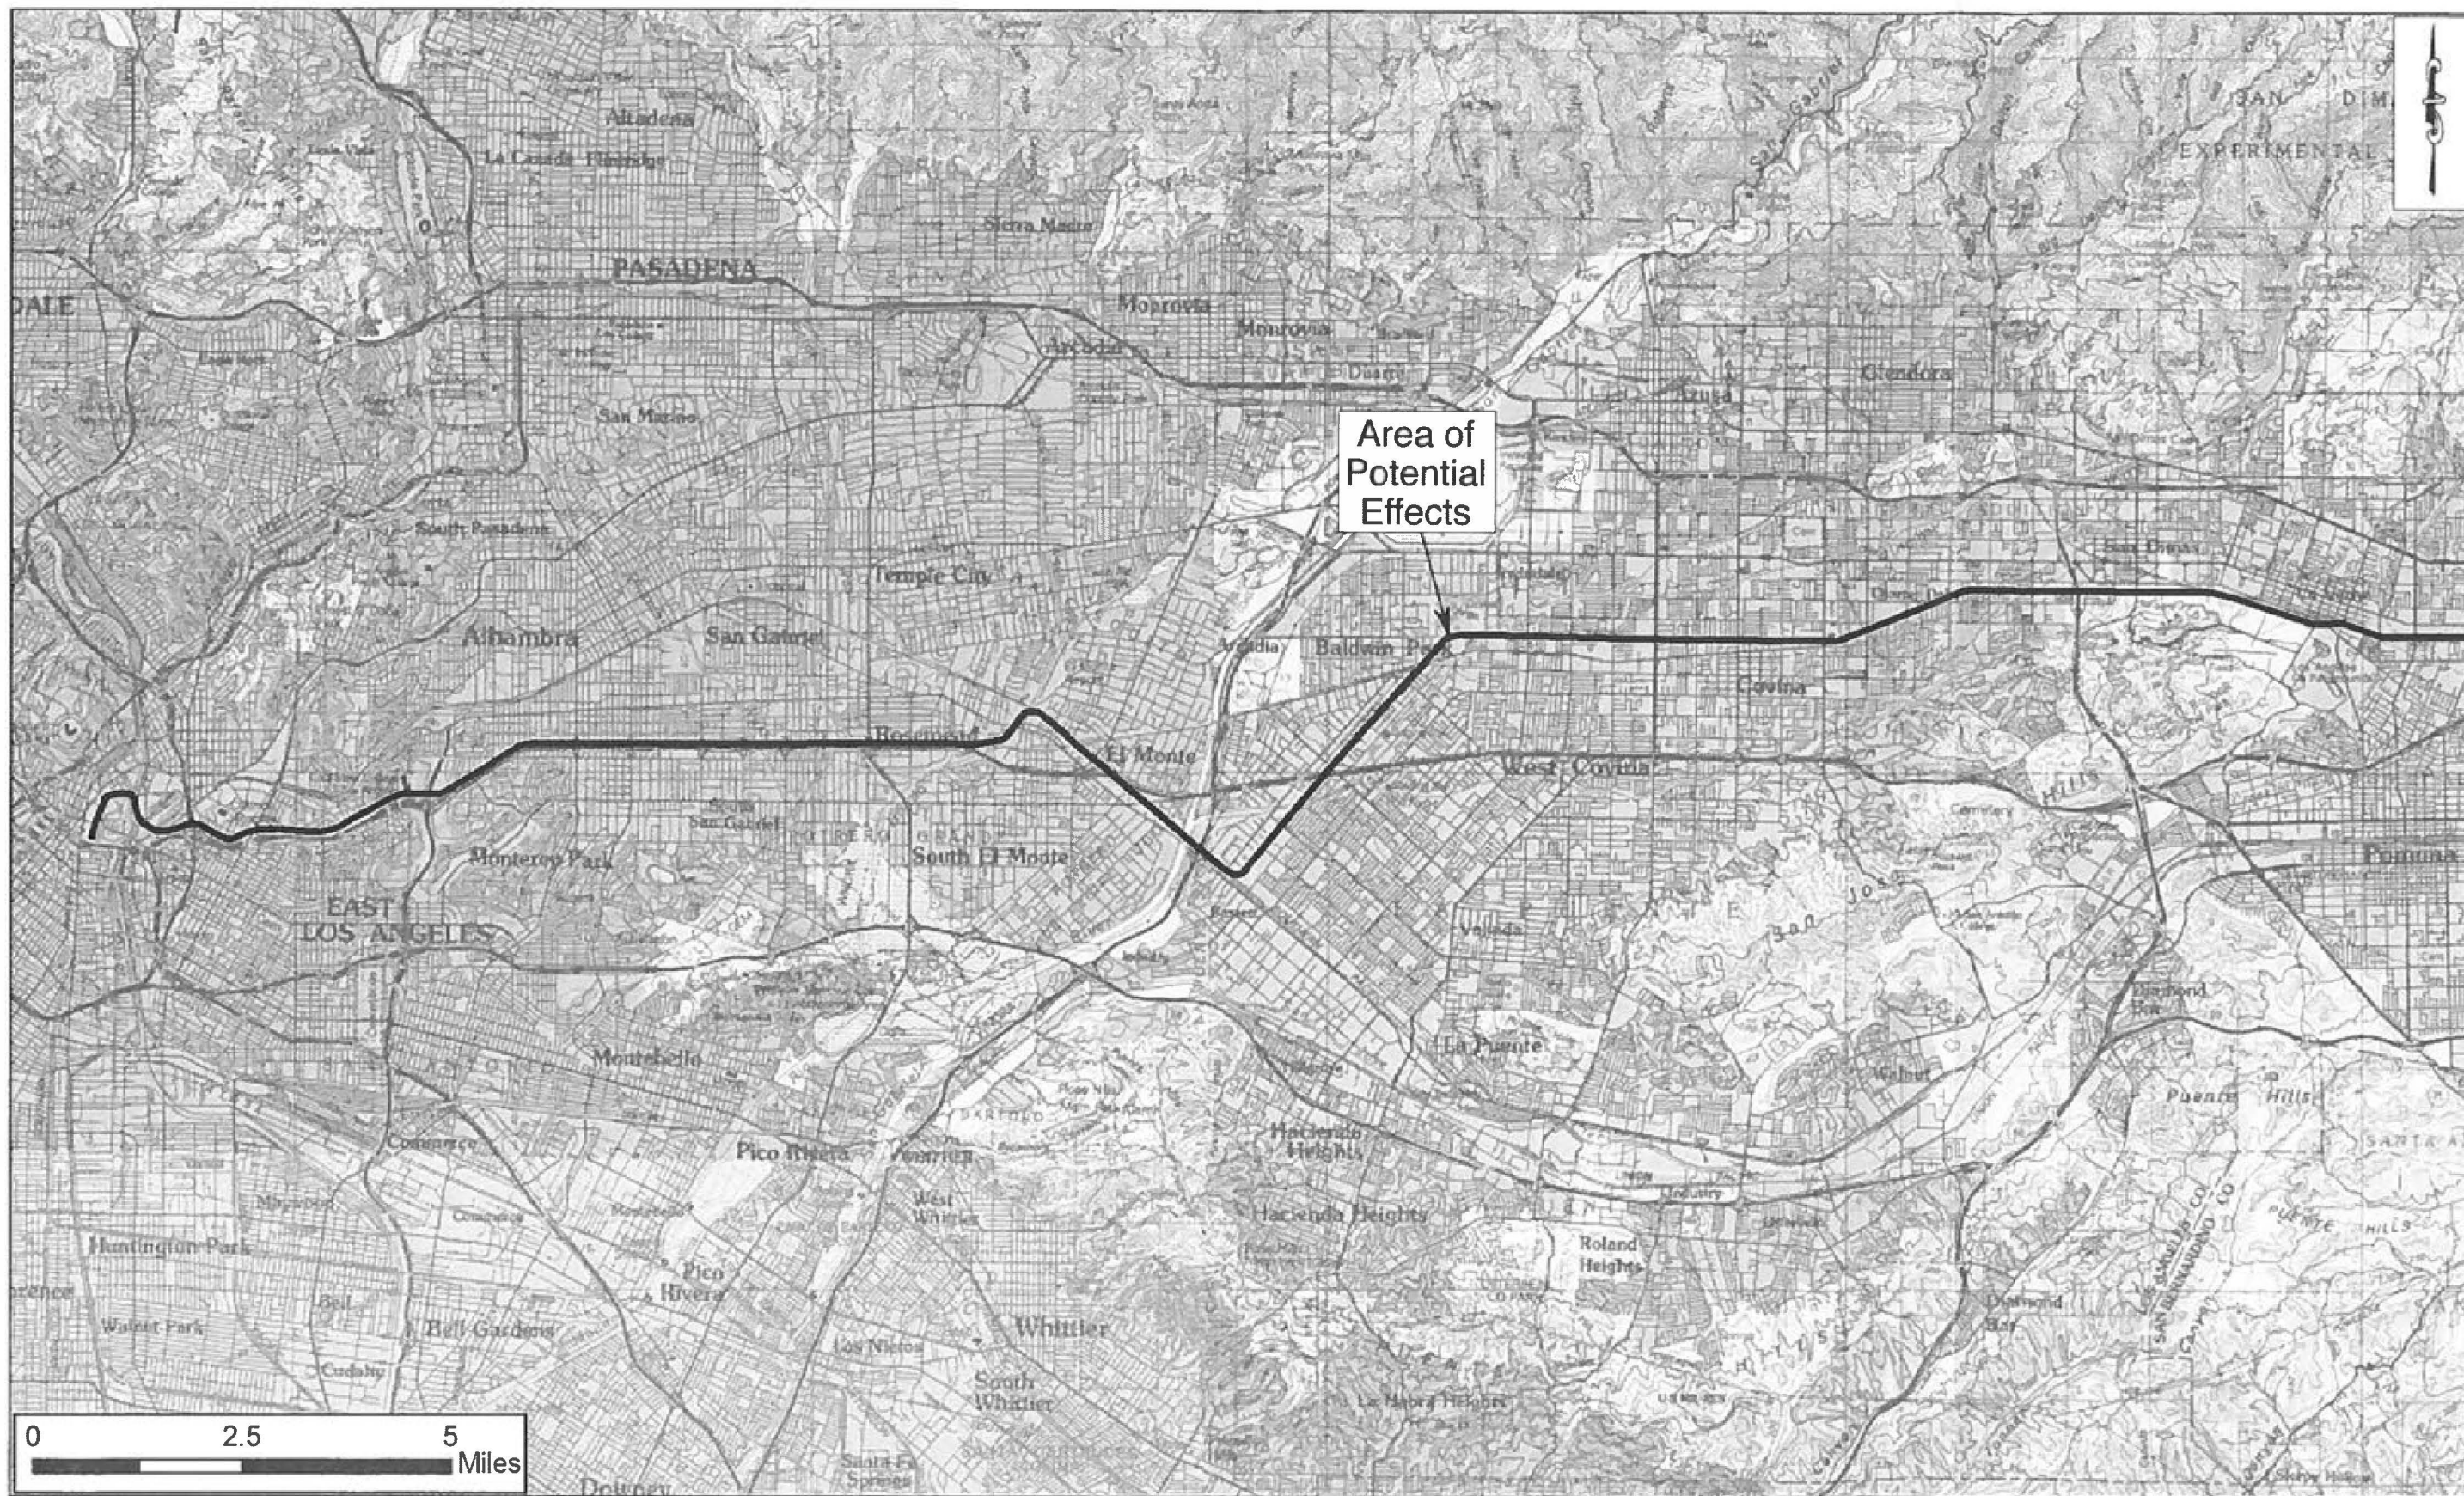

Figure 1a. Location of the APE (western portion).

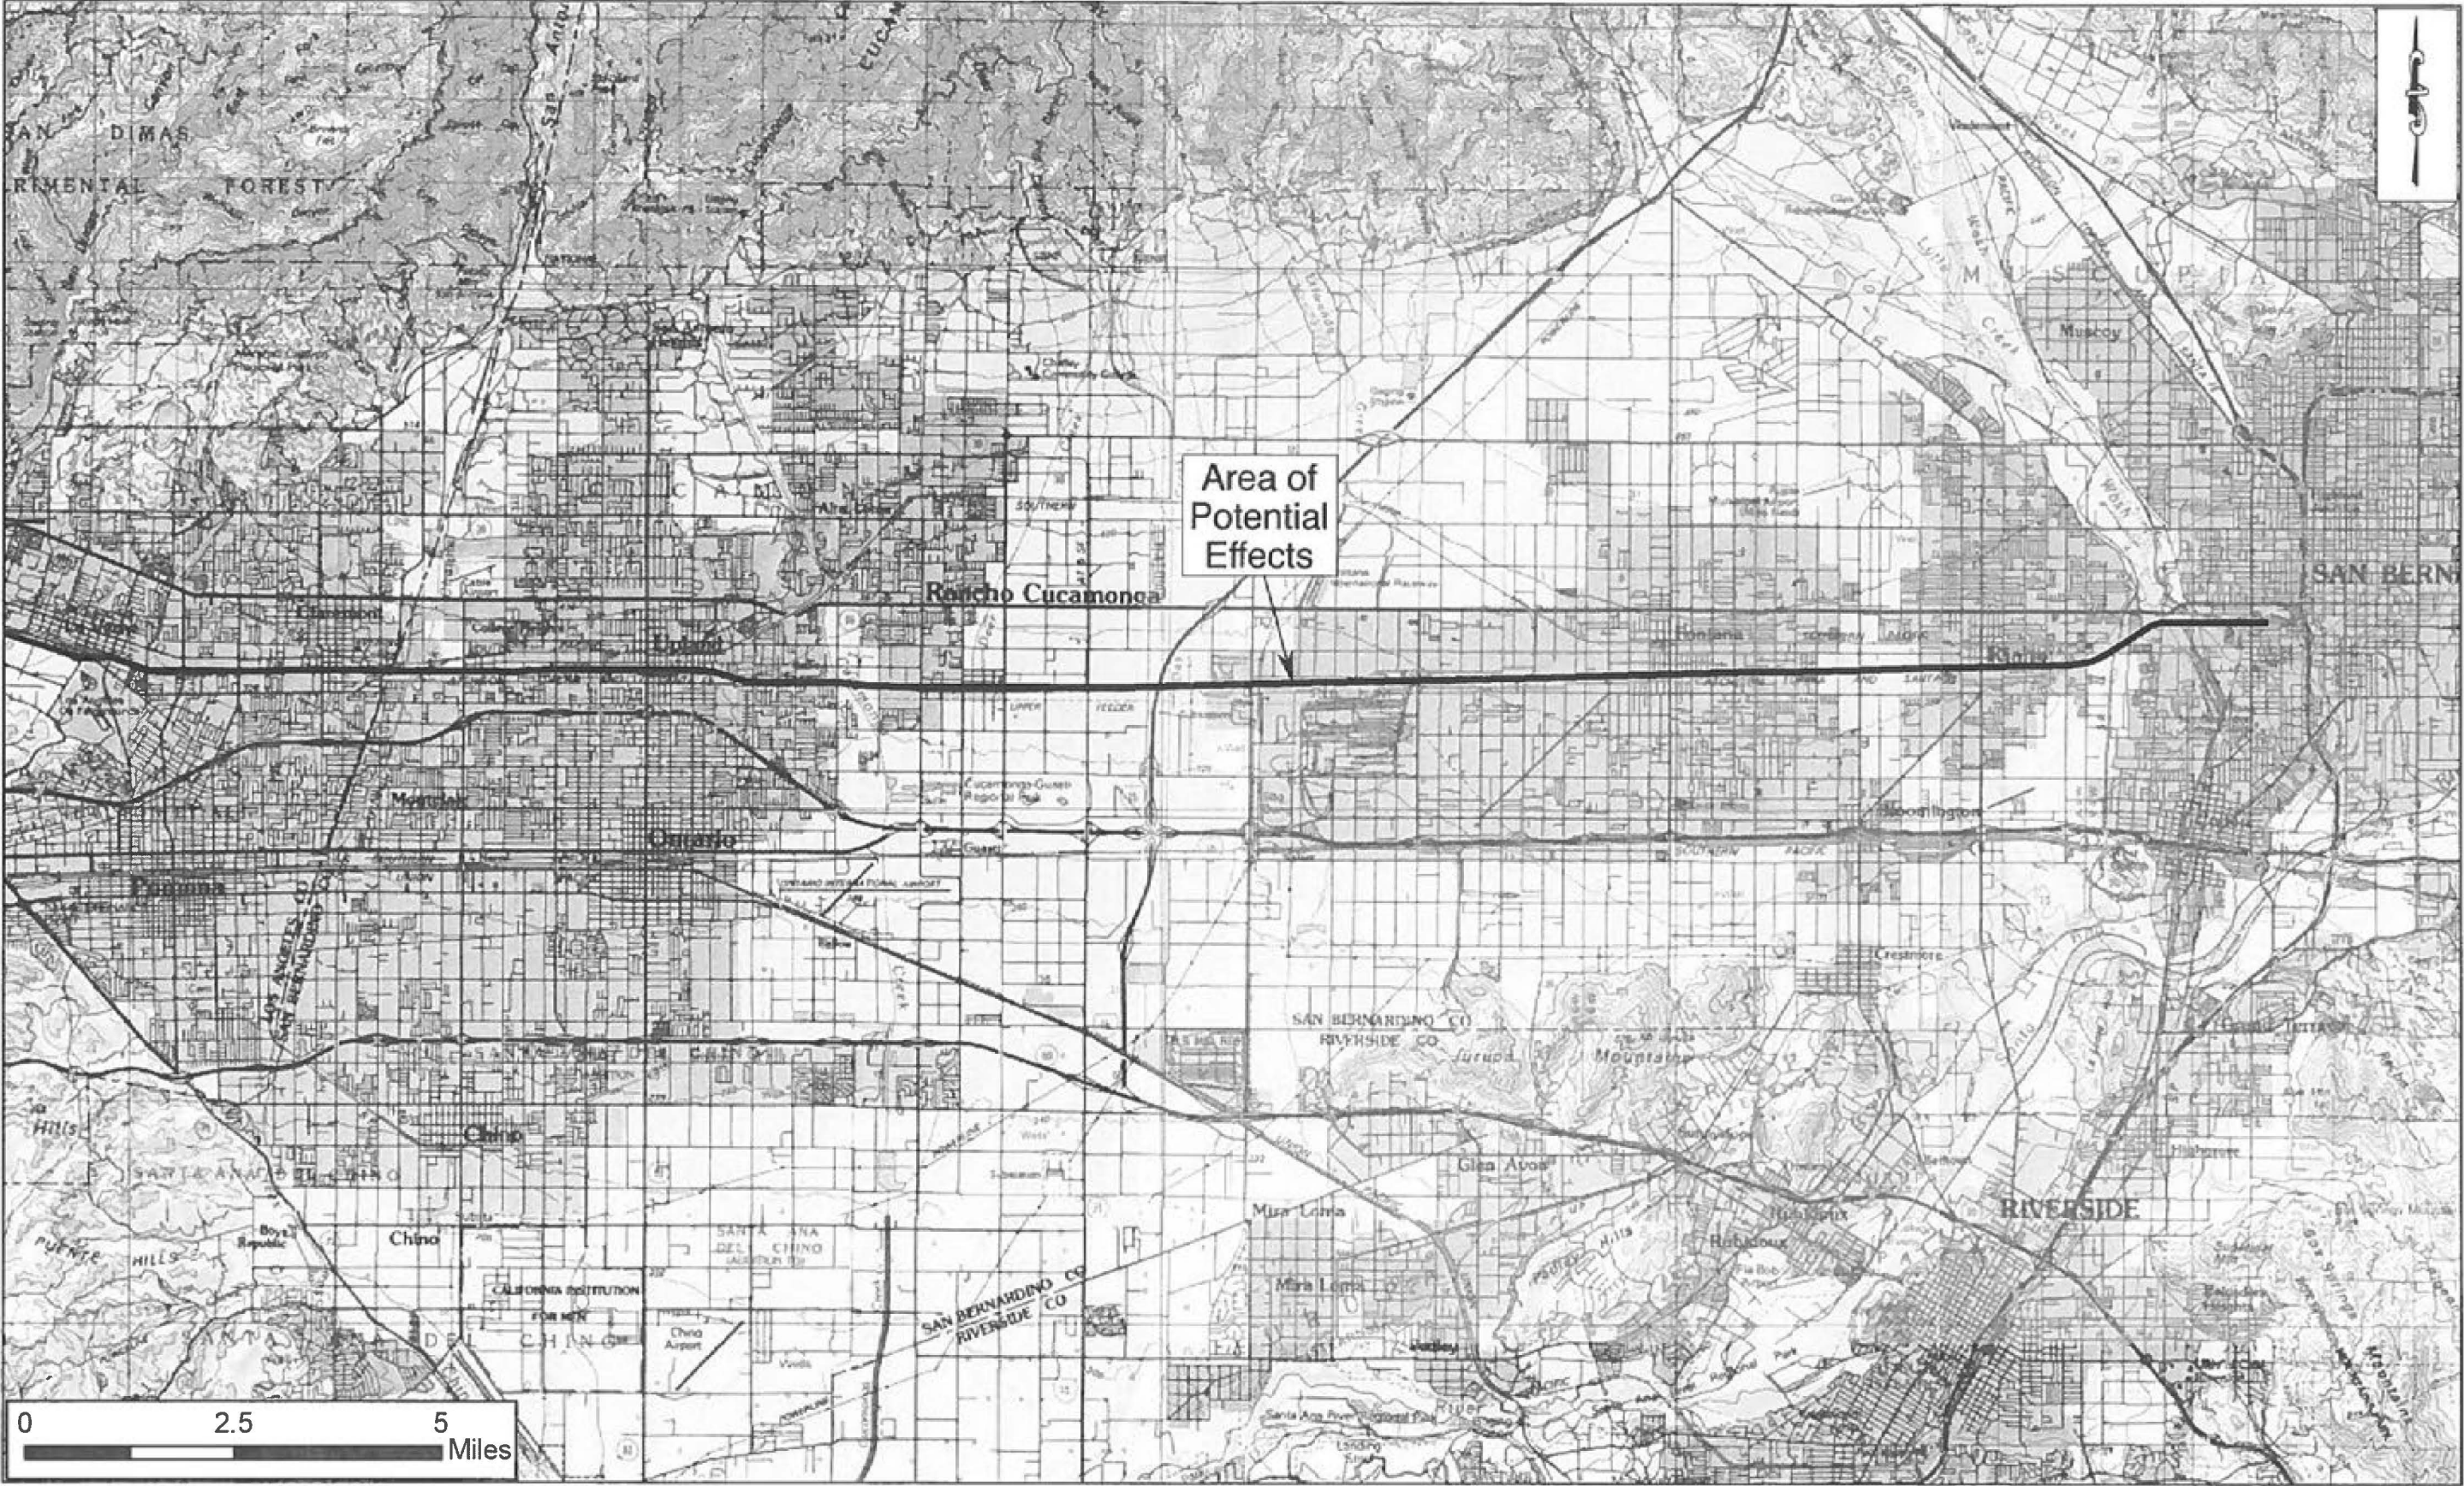

Figure 1b. Location of the APE (eastern portion).

During the records search, Gallardo checked files and maps on record at the AIC and the SCCIC for previously identified historical/ archaeological resources and existing cultural resources studies in the project vicinity. Previously identified cultural resources include properties designated as California Historical Landmarks or Points of Historical Interest as well as those listed in the National Register of Historic Places, the California Register of Historical Resources, or the California Historical Resources Inventory. The scope of the records searches encompassed the area within a quarter-mile radius of the APE.

According to AIC and SCCIC records, more than 50 previous cultural resources studies included portions of the APE. These surveys were carried out in support of an assortment of projects including transmission lines, water and gas pipelines, city-sponsored redevelopment, telecommunications infrastructure, roadway improvements, and commercial developments. A careful review of the record search results indicates that two historic-period sites, 36-006847 and 36-010316, and three "pending" historic-period sites, P1074-61H, P1074-88H, and P1074-121H, have been identified as lying partially within the APE (see App. 2 for locations).

The eastern half of the APE coincides with Site 36-006847, consisting of the portion of the former Atchison, Topeka and Santa Fe Railway Company's famed Kite-Shaped Track located in San Bernardino County. The Kite-Shaped Track, a popular late 19th to early 20th century railroad excursion route extending from Los Angeles to Redlands and Highland, was constructed in phases between 1880 and 1892 through various Santa Fe subsidiaries, and the segment within the APE was a part of the San Bernardino and Los Angeles Railway, which was completed from present-day San Dimas to San Bernardino in 1886-1887 (Bryant 1974:102-103; Serpico 1988:23).

As an important link in the second transcontinental railroad system to reach California, the Kite-Shaped Track once played a crucial role in the growth of southern California. As a working component of the modern transportation infrastructure, however, Site 36-006847 was previously determined not to be historically significant due to the loss of integrity (Horne 1998:6).

Site 36-010316 represents the Kramer-Victorville 115kv transmission line, part of the former Southern Sierra Power Company's San Bernardino 140kv Transmission Line. Built between 1911 and 1913, the original transmission line featured small lattice steel towers; however, these have been upgraded over time with larger lattice steel towers and concrete footings. The transmission line remains in use today and is maintained regularly.

P1074-61H represents the course of a historic-period road located in the present-day Rialto area of San Bernardino County. It reportedly predates the railroad and at one time connected with the Los Angeles-San Bernardino Road to the north. P1074-88H is identified as the Rancheria Ditch, which was built in 1843 to bring water from nearby Lytle Creek south to a settlement in present-day Colton. It supplied a small number of settlers with water for crops and livestock for most of the second half of the 19th century. The exact locations where the road and the ditch crossed the APE are unclear and could not be precisely identified with the records search results. However, with the construction of the railroad line and the subsequent urban development of the

surrounding area since then, it is likely that these features no longer exist, at least within the APE.

P1074-121H, known as the Santa Fe Viaduct, was constructed by the Santa Fe Railway around 1918 to help traffic navigate across the massive rail yard at the Santa Fe depot in San Bernardino (SANBAG n.d.). The viaduct was originally about 20 feet wide, with a sharp and often lethal turn at its midpoint leading to Third Street (*ibid.*; *Profiles* 1960:10). By the early 1930s, redesign plans were drawn up for a diagonal route from Mount Vernon Avenue in order to address this safety issue (*San Bernardino Sun* 1931; 1932).

In addition to these five recorded or "pending" sites, the western half of the APE coincides with a segment of the former Southern Pacific Railway, originally a part of the Pacific Electric Railway's interurban rail system. Constructed between 1906 and 1914, it eventually linked Los Angeles with San Bernardino. Although this segment of the rail line has not been formally recorded, another segment of the Pacific Electric Railway's San Bernardino Line in San Bernardino County was previously recorded as Site 36-020137. Therefore, the rail line in the western portion of the APE should be considered an extension of Site 36-020137 that has yet to be formally documented in the California Historical Resources Information System.

Outside the APE but within the quarter-mile radius, AIC and SCCIC records show some 150 previous cultural resources studies covering various tracts of land and linear features. As a result of these and other similar studies, at least 65 historical/archaeological sites and prehistoric isolates—i.e., localities with fewer than three Native American artifacts—have been identified within the scope of the records search.

A large percentage of recorded sites within the quarter-mile radius represent single-family residences dating to the first half of the 20th century and other built environmental features, including a number of commercial or public buildings, such as those occupied by the University of LaVerne, Claremont College, El Monte High School, and the Cucamonga Pioneer Winery, as well as the Russian Village District and the Sinclair Commercial Block. Prehistoric sites in the scope of the records search included a few habitation sites with groundstone and chipped-stone tools, lithic quarries, and midden deposits, and prehistoric isolates typically consisted of chipped-stone or groundstone tools found near the foothills. Other than the five sites discussed above, none of the site or isolates was found in the immediate vicinity of the APE, and thus none of them requires further consideration in connection with this study.

HISTORICAL BACKGROUND REVIEW

In the mid-1800s, cattle raising on vast ranchos carved from former mission land holdings was the most prevalent economic activity throughout southern California, until the influx of American settlers eventually brought an end to this now-romanticized lifestyle during the second half of the 19th century. In the 1880s, spurred by the completion of the competing Southern Pacific and the Santa Fe Railways, a land boom swept through much of southern California, creating an immediate and significant boost to the growth of the region, in a pattern often repeated in the history of the American West.

A large number of towns, surrounded by irrigated agricultural land, were laid out in the inland valleys before the end of the 19th century, including many established along the rail lines in the APE. For the remainder of the 19th century and well into the 20th, the region along the APE remained agrarian in character, dominated particularly by citrus growing after the successful introduction of the naval orange in the mid-1870s. As the region prospered, the different communities developed distinctive economic and social characteristics. Communities in the Chino Basin area, for example, became known as the dairy capital of southern California, especially after World War II, while the present-day Rancho Cucamonga area established a different identity through vineyard cultivation and winemaking. San Bernardino became an important transportation hub, largely predicated on the selection of the city by the Santa Fe Railway as its regional headquarters in the early 20th century.

By the mid- and late 20th century, however, the forces of industrialization and urbanization dramatically altered the agrarian landscape as urban expansion and residential development increasingly assumed a dominant role. Settlement, though still dense along the railroad, shifted to a more contemporary urban landscape, as industries in need of rail transport remained focused along the railroad and residential areas and new urban cores developed away from the rail lines. Today, continued development has essentially merged the cities along the APE into one metropolitan area.

NATIVE AMERICAN SCOPING

On May 3, 2010, CRM TECH submitted a written request to the State of California's Native American Heritage Commission (NAHC) for a records search in the commission's sacred lands file. In response to CRM TECH's inquiry, the NAHC reports in a letter dated May 6, 2010, that the record search indicated the presence of Native American cultural resources within a half-mile radius of the APE, and recommends that local Native American groups be contacted for further information. For that purpose, the commission provided a list of potential contacts in the region.

Upon receiving the commission's response, CRM TECH initiated correspondence with all 17 individuals on the referral list and the organizations they represent both in writing and by telephone between May 26 and August 3 to solicit local Native American input regarding any possible cultural resources concerns over the proposed project. In addition, John Gomez, Jr., Cultural Resources Coordinator for the Ramona Band of Cahuilla Mission Indians, and Anna Hoover, Cultural Analyst for the Pechanga Band of Louseño Indians, were also contacted. The correspondences between CRM TECH and the Native American representatives are attached to this report in Appendix 3. As of this time, five written and three verbal responses have been received (see App. 3).

Ernest Siva, a Tribal Elder with the Morongo Band of Mission Indians, responded by telephone and stated that he did not have any specific concerns regarding the APE. John Tommy Rosas, Tribal Administrator of the Tongva Ancestral Territorial Tribal Nation, stated that he objected to the proposed project and would send a formal letter at a later date.

Anthony Morales, Chairperson of the Gabrieleño/Tongva San Gabriel Band of Mission Indians, stated that the APE is in an extremely sensitive area for Native American

cultural resources. He explained that not only was the village of *Puvungna* in the vicinity of the APE, but that railroad lines, which followed major Native American trade routes, were often good indications that Native American burials might be encountered during ground-disturbing activities. Mr. Morales recommended that a Native American monitor from the Gabrielino/Tongva San Gabriel Band and an archaeologist be present during such activities associated with the project. Furthermore, he requested to be contacted prior to the commencement of the project to set up a monitoring agreement.

In two written correspondences dated May 26 and June 12, Andy Salas, Chairman of the Gabrieleño Band of Mission Indians, also states that the APE is extremely sensitive for Native American cultural resources. Tribal elders have related that their ancestors walked along a trail from San Bernardino to San Gabriel and have identified several named Gabrieleño village sites along the project route. Mr. Salas requests that CRM TECH recommend a Native American monitoring component for the project and that monitors from the Gabrieleño Band of Mission Indians be on site for all ground-disturbing activities.

In a letter dated June 9, Joseph Ontiveros, Cultural Resources Director for the Soboba Band of Luiseño Indians, states that the project location lies within the tribe's Traditional Use Area, and is extremely sensitive to the Soboba Band as it is in close proximity to known village sites. He requests that a Native American monitor from the Soboba Band be present during for future surveys earth-moving activities in the APE, and that the Soboba Band continue to be included in future government-to-government consultation with the lead agency.

In a letter dated June 11, Anna Hoover, Cultural Analyst for the Pechanga Band of Luiseño Indians states: "the project area is not within reservation lands and it is not within our ancestral territory." Ms. Hoover requests that other tribes located closer to the APE, such as the San Manuel Band of Mission Indians be contacted for further consultation. However, she requests copies of all pertinent archaeological documentation for tribal review. In the event that subsurface cultural resources are identified within the APE and a closer Native American tribe cannot be identified or contacted, the Pechanga Band requests to be contacted by the lead agency regarding the treatment and disposition of all artifacts.

In an e-mail dated June 27, Sam Dunlap, Tribal Chairman of the Gabrielino Tongva Nation, recommends archaeological monitoring be required during ground-disturbing activities based on the possibility of encountering historic archaeological materials. If any prehistoric cultural resources are discovered, Mr. Dunlap requests that the Gabrielino Tongva Nation be contacted for further consultation.

FIELD SURVEY

On May 17, 2010, CRM TECH archaeologist Daniel Ballester (see App. 1 for qualifications) completed the field reconnaissance of the APE. The survey was accomplished by driving along the project route in a motor vehicle, as close to the railroad tracks as proper access would permit. When features of potential historical/

archaeological interest were encountered, they were inspected briefly on foot and photographed, and their locations were noted on project maps for future references.

During the field reconnaissance, the former Southern Pacific Railway line in the western portion of the APE, the former Atchison, Topeka and Santa Fe Railway in the eastern portion (Site 36-006847), and the Kramer-Victorville 115kv transmission line (36-010316) that crosses the project route near the Lytle Creek channel were the only potential cultural resources observed within or partially within the APE. Field observations confirmed that many physical components of the transmission line have been altered or replaced over the years, as stated in the existing site record. Furthermore, the only components of the powerline located in the APE are the overhead wires, and the proposed project has no potential to affect its current configuration and appearance.

The rail lines also remain under use and, because of repeated upgrading and constant maintenance, do not demonstrate any particular historical characteristics through their physical components. In addition, the ground surface along the rail lines has been extensively disturbed in the past, leaving it rather unlikely for any subsurface archaeological deposits, especially those of prehistoric origin, to survive intact within the APE. No features associated with the three "pending" sites identified by the records searches were observed during the field reconnaissance, nor were any other potential cultural resources, either historic or prehistoric in age, found within the APE.

SUMMARY OF FINDINGS

Based on the results of the records search, the reconnaissance survey, and a historical background review, CRM TECH concludes that no "historic properties" or "historical resources," as defined by pertinent federal and state statutes and regulations, are known to be present within or adjacent to the APE. Furthermore, the APE appears to be relatively low in sensitivity for "historic properties" or "historical resources" yet to be recorded.

The results of this study indicate that the only potential cultural resources known to be located within the APE are features associated with the railroad operations. Some of these features may need to be formally recorded and evaluated because of their age, especially those associated with the former Pacific Electric/Southern Pacific Railway line in the western portion of the APE, which has not been recorded previously. However, the rail lines themselves and their associated features are generally unlikely to be considered eligible for listing in the National Register of Historic Places or the California Register of Historical Resources due to the lack of the necessary integrity to relate to their potential period of significance. In fact, another segment of the former Atchison, Topeka and Santa Fe line, as a part of Site 36-006847, was previously determined not to be historically significant for that reason, as mentioned earlier.

Due to limitation in the existing documentation and in the scope of this study, the historical background and current conditions of the three "pending" sites previously identified in the APE, P1074-61H (historic-period road), P1074-88H (Rancheria Ditch), and P1074-121H (Santa Fe Viaduct), remain unclear at this time. If ground-disturbing activities will occur at or near the reported locations of these "pending" sites, CRM TECH recommends that further studies, including focused historical research and

intensive-level field inspections, be completed to ascertain their current conditions and, if any of their features remain in existence in the APE, their qualifications as "historic properties," as defined by Section 106, or "historical resources," as defined by CEQA.

Thank you for this opportunity to be of service. If you need any further information, please feel free to contact our office at (909) 824-6400.

Sincerely,

Bai "Tom" Tang, M.A.

Re: Request for a Sacred Lands File Search and Native American Contacts List for the proposed "The SCRRRA San Gabriel Subdivision Positive Train Control Project (CRM TECH #2446) " located (linear 57 miles) in or near the cities of Los Angeles, El Monte, Baldwin Park and Covina in Los Angeles County; and in or near the cities of Upland, Ontario, Fontana, Rialto and San Bernardino in San Bernardino County, California

Dear Mr. Ballester:

The Native American Heritage Commission (NAHC), the State of California 'Trustee Agency' for the protection and preservation of Native American cultural resources (c.f. CA Public Resources Code §21070; also c.f. *Environmental Protection Information Center v. Johnson* [1981] 170 Cal App. 3^d 604), was able to perform a record search of its Sacred Lands File (SLF) for the affected project area (APE) requested. The California Environmental Quality Act (CEQA; CA Public Resources Code Section 21000 – 21177) requires that any project that causes a substantial adverse change in the significance of an historical resource, that includes archaeological resources, is a 'significant effect' requiring the preparation of an Environmental Impact Report (EIR) per the California Code of Regulations §15064.5(b)(c) (f) CEQA guidelines). Section 15382 of the 2007 CEQA Guidelines defines a significant impact on the environment as "a substantial, or potentially substantial, adverse change in any of physical conditions within an area affected by the proposed project, including ... objects of historic or aesthetic significance." The NAHC SLF search did indicate the presence of Native American cultural resources within one-half mile of the proposed project site (APE).

Also, this letter includes state and federal statutes relating to Native American historic properties of religious and cultural significance to American Indian tribes and interested Native American individuals as 'consulting parties' under both state and federal law.

Early consultation with Native American tribes in your area is the best way to avoid unanticipated discoveries once a project is underway. Culturally-affiliated tribes and individuals may have knowledge of the religious and cultural significance of the historic properties in the project area (e.g. APE). We recommend that you contact persons on the attached list of Native American contacts. Furthermore we suggest that you contact the California Historic Resources Information System (CHRIS) at the Office of Historic Preservation Coordinator's office (at (916) 653-7278, for referral to the nearest Information Center of which there are 10.

Consultation with tribes and interested Native American consulting parties, on the NAHC list, should be conducted in compliance with the requirements of federal NEPA (42 U.S.C. 4321-43351) and Section 106 and 4(f) of federal NHPA (16 U.S.C. 470 [f] *et seq.*), 36 CFR Part 800.3 (f) (2), the President's Council on Environmental Quality (CSQ; 42 U.S.C. 4371 *et seq.*) and NAGPRA (25 U.S.C. 3001-3013), as appropriate. The 1992 *Secretary of the Interior's Standards for the Treatment of Historic Properties* were revised so that they could be applied to all historic resource types included in the National Register of Historic Places and including *cultural landscapes*.

Lead agencies should consider avoidance, as defined in Section 15370 of the California Environmental Quality Act (CEQA) when significant cultural resources could be affected by a project. Also, Public Resources Code Section 5097.98 and Health & Safety Code Section 7050.5 provide for provisions for accidentally discovered archeological resources during construction and mandate the processes to be followed in the event of an accidental discovery of any human remains in a project location other than a 'dedicated cemetery.

Although tribal consultation under the California Environmental Quality Act (CEQA; CA Public Resources Code Section 21000 – 21177) is 'advisory' rather than mandated, the NAHC does request 'lead agencies' to work with tribes and interested Native American individuals as 'consulting parties.' However, the 2006 SB 1059 the state enabling legislation to the Federal Energy Policy Act of 2005, does mandate tribal consultation for the 'electric transmission corridors. This is codified in the California Public Resources Code, Chapter 4.3, and §25330 to Division 15, requires consultation with California Native American tribes, and identifies both federally recognized and non-federally recognized on a list maintained by the NAHC. Consultation on specific projects must be the result of an on-going relationship between Native American tribes and lead agencies, project proponents and their contractors, in the opinion of the NAHC. Regarding tribal consultation, a relationship built around regular meetings and informal involvement with local tribes will lead to more qualitative consultation tribal input on specific projects.

The response to this search for Native American cultural resources is conducted in the NAHC Sacred Lands Inventory, established by the California Legislature (CA Public Resources Code §5097.94(a) and is exempt from the CA Public Records Act (c.f. California Government Code §6254.10) although Native Americans on the attached contact list may wish to reveal the nature of identified cultural resources/historic properties. Confidentiality of "historic properties of religious and cultural significance" may also be protected under Section 304 of the NHPA or at the Secretary of the Interior's discretion if not eligible for listing on the National Register of Historic Places. The Secretary may also be advised by the federal Indian Religious Freedom Act (cf. 42 U.S.C. 1996) in issuing a decision on whether or not to disclose items of religious and/or cultural significance identified in or near the APE and possibly threatened by proposed project activity.

If you have any questions about this response to your request, please do not hesitate to contact me at (916) 653-6251.

Sincerely,

Dave Singleton
Program Analyst

RE: The Southern California Regional Rail Authority San Gabriel Subdivision Positive
Train Control Project
San Bernardino to Los Angeles, San Bernardino and Los Angeles Counties
CRM TECH Contract #2446

Dear Mr. Acuna:

As part of a cultural resources study for the undertaking referenced above, I am writing to request your input on potential Native American cultural resources in or near the Area of Potential Effects (APE). Please respond at your earliest convenience if you have any specific knowledge of sacred/religious sites or other sites of Native American traditional cultural value within or near the APE. The lead agencies for this project are the Federal Railroad Administration and Caltrans for Section 106-compliance purposes.

The proposed undertaking involves positive train control (PTC) improvements to be made along 56 miles of existing rail line. These improvements include the installation of electronic sensors and automatic stopping devices for the purpose of implementing safety measures that will reduce the number of accidents at grade crossings. The accompanying map, based on the USGS Los Angeles and San Bernardino, Calif., 1:250,000 quadrangles, depicts this 56-mile railroad track running through and near the Cities of San Bernardino, Rialto, Fontana, Ontario, Upland, Claremont, Covina, Baldwin Park, El Monte, San Gabriel, Rosemead, San Gabriel, Monterey Park, and Los Angeles, in San Bernardino and Los Angeles Counties.

Any information, concerns, or recommendations regarding cultural resources in the vicinity of the APE may be forwarded to CRM TECH by telephone, e-mail, facsimile or standard mail. Requests for documentation or information we cannot provide will be forwarded to our client and/or the lead agencies. We would also like to clarify that CRM TECH, as the cultural resources consultant for the project, is not the appropriate entity to initiate government-to-government consultations. Thank you for the time and effort in addressing this important matter.

Respectfully,

Laura Hensley Shaker
CRM TECH

To: Laura Shaker <lshaker@crmtech.us>
Cc: Andy Salas <andysalas07@yahoo.com>
Subject: Re: Scoping letter for CRM TECH project #2446

Dear Ms. Shaker,

We are responding to the attached CRM TECH scoping letter in regards to the Southern California Regional Rail Authority San Gabriel Subdivision Positive Train Control Project, San Bernardino to Los Angeles County CRM TECH Contract #2446. Please be advised that our ancestral lands included all of what is now Los Angeles County, including but not limited to the San Gabriel Mountains, to the coast, to the northern part of Orange County, and clear across to the islands of San Clemente, San Nicolas, and Santa Catalina. Hundreds of our historic villages covered these territories and it is my duty as Chairman to protect our culture.

The villages known as Aleupkingna, Asuksangna, Kukamongna and Waatngna were all along the foothills of the San Gabriel Mountains. This project would run through these historic village sites. Therefore, we recommend one of our NA monitors to be on site during any ground disturbances/excavation. We take no exceptions.

Please contact our office prior to any construction to coordinate an NA monitor.

Sincerely,

Andy Salas
Gabrieleno Band of Mission Indians

**Re: THE SOUTHERN CALIFORNIA REGIONAL RAIL AUTHORITY SHORT
WAY SUBDIVISION POSITIVE
TRAIN CONTROL PROJECT
SAN BERNARDINO TO LOS ANGELES, SAN BERNARDINO TO LOS ANGELES
COUNTY
CRM TECH CONTRACT # 2446**

The Soboba Band of Luiseño Indians appreciates your observance of Tribal Cultural Resources and their preservation in your project. The information provided to us on said project has been assessed through our Cultural Resource Department, where it was concluded that although it is outside the existing reservation, the project area does fall within the bounds of our Tribal Traditional Use Areas. This project location is in close proximity to known village sites and is a shared use area that was used in ongoing trade between the Luiseno and Cahuilla tribes. Therefore it is regarded as highly sensitive to the people of Soboba.

Soboba Band of Luiseño Indians is requesting the following:

1. **Government to Government** consultation in accordance to Section 106. Including the transfer of information to the Soboba Band of Luiseno Indians regarding the progress of this project should be done as soon as new developments occur.
2. Soboba Band of Luiseño Indians continue to be a lead consulting tribal entity for this project.
3. Working in and around traditional use areas intensifies the possibility of encountering cultural resources during the construction/excavation phase. For this reason the Soboba Band of Luiseño Indians requests that Native American Monitor(s) from the Soboba Band of Luiseño Indians Cultural Resource Department to be present during any ground disturbing proceedings. Including surveys and archaeological testing.
4. Request that proper procedures be taken and requests of the tribe be honored (Please see the attachment)

Sincerely,

Joseph Ontiveros
Soboba Cultural Resource Department

Cell (951) 663-5279
jontiveros@soboba-nsn.gov

Cultural Items (Artifacts). Ceremonial items and items of cultural patrimony reflect traditional religious beliefs and practices of the Soboba Band. The Developer should agree to return all Native American ceremonial items and items of cultural patrimony that may be found on the project site to the Soboba Band for appropriate treatment. In addition, the Soboba Band requests the return of all other cultural items (artifacts) that are recovered during the course of archaeological investigations. Where appropriate and agreed upon in advance, Developer's archeologist may conduct analyses of certain artifact classes if required by CEQA, Section 106 of NHPA, the mitigation measures or conditions of approval for the Project. This may include but is not limited or restricted to include shell, bone, ceramic, stone or other artifacts.

The Developer should waive any and all claims to ownership of Native American ceremonial and cultural artifacts that may be found on the Project site. Upon completion of authorized and mandatory archeological analysis, the Developer should return said artifacts to the Soboba Band within a reasonable time period agreed to by the Parties and not to exceed (30) days from the initial recovery of the items.

Treatment and Disposition of Remains

- A. The Soboba Band shall be allowed, under California Public Resources Code § 5097.98 (a), to (1) inspect the site of the discovery and (2) make determinations as to how the human remains and grave goods shall be treated and disposed of with appropriate dignity.
- B. The Soboba Band, as MLD, shall complete its inspection within twenty-four (24) hours of receiving notification from either the Developer or the NAHC, as required by California Public Resources Code § 5097.98 (a). The Parties agree to discuss in good faith what constitutes "appropriate dignity" as that term is used in the applicable statutes.
- C. Reburial of human remains shall be accomplished in compliance with the California Public Resources Code § 5097.98 (a) and (b). The Soboba Band, as the MLD in consultation with the Developer, shall make the final discretionary determination regarding the appropriate disposition and treatment of human remains.
- D. All parties are aware that the Soboba Band may wish to rebury the human remains and associated ceremonial and cultural items (artifacts) on or near, the site of their discovery, in an area that shall not be subject to future subsurface

disturbances. The Developer should accommodate on-site reburial in a location mutually agreed upon by the Parties.

E. The term "human remains" encompasses more than human bones because the Soboba Band's traditions periodically necessitated the ceremonial burning of human remains. Grave goods are those artifacts associated with any human remains. These items, and other funerary remnants and their ashes are to be treated in the same manner as human bone fragments or bones that remain intact

Coordination with County Coroner's Office. The Lead Agencies and the Developer should immediately contact both the Coroner and the Soboba Band in the event that any human remains are discovered during implementation of the Project. If the Coroner recognizes the human remains to be those of a Native American, or has reason to believe that they are those of a Native American, the Coroner shall ensure that notification is provided to the NAHC within twenty-four (24) hours of the determination, as required by California Health and Safety Code § 7050.5 (c).

Non-Disclosure of Location Reburials. It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or cultural artifacts shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code § 6254 (r).

Ceremonial items and items of cultural patrimony reflect traditional religious beliefs and practices of the Soboba Band. The Developer agrees to return all Native American ceremonial items and items of cultural patrimony that may be found on the project site to the Soboba Band for appropriate treatment. In addition, the Soboba Band requests the return of all other cultural items (artifacts) that are recovered during the course of archaeological investigations. Where appropriate and agreed upon in advance, Developer's archeologist may conduct analyses of certain artifact classes if required by CEQA, Section 106 of NHPA, the mitigation measures or conditions of approval for the Project. This may include but is not limited or restricted to include shell, bone, ceramic, stone or other artifacts.

**RE: Request for Information for The Southern California Regional Rail Authority
San Gabriel Subdivision Positive Train Control Project, CRM Tech Project No 2446
(CRM Tech)**

Dear Ms. Shaker;

The Pechanga Band of Luiseño Indians ("the Tribe") appreciates your request for information regarding the above referenced project. After reviewing the provided maps and internal documents, we have determined that the project area is not within reservation lands and it is not within our ancestral territory. At this time, we have no further information regarding this project and suggest contacting a closer tribe, such as the San Manuel Band of Mission Indians or the Morongo Band of Mission Indians, to continue consultation.

However, the Tribe requests the following:

- 1) Copies of all applicable archaeological reports and site records for the Project; and
- 2) In the event that subsurface cultural resources are identified and a closer Tribe cannot be identified/contacted, the Tribe requests consultation with the project proponent and Lead Agency regarding the treatment and disposition of all artifacts.

As a sovereign governmental entity, the Tribe is entitled to appropriate and adequate government-to-government consultation regarding the proposed project. We would like you and your client to know that the Tribe does not consider initial inquiry letters from project consultants to constitute appropriate government-to-government consultation, but rather tools to obtain further information about the project area. Therefore, the Tribe reserves its rights to participate in the formal environmental review process, including government-to-government consultation with the Lead Agency, and requests to be included in all correspondence regarding this project.

Please note that we are interested in participating in surveys within Luiseño ancestral territory. Prior to conducting any surveys, please contact the Cultural Department to schedule specifics. If you have any additional questions or comments, please contact me at ahoover@pechanga-nsn.gov or 951-308-9295.

Sincerely,

Re: The Southern California Regional Rail Authority
San Gabriel Subdivision Control Project
CRM TECH Contract #2446

Dear Ms. Shaker;

This letter is in response to your letter dated May 26, 2010 in regards to the above referenced project. Please be advised that the entire project lies within sensitive cultural areas. Often archaeologists feel they know our history better than our elders. We have found too many times many village sites and sensitive cultural areas have been overlooked. Our Council of Elders has the knowledge to determine what areas of future development are of concern and they can accurately identify specific villages and their names throughout Los Angeles and Orange counties. We, as the future generations, must protect the remains and artifacts of our people that may be unearthed by development. The following historic village sites lie along the entire project:

Saxangna – San Bernardino

Winingna – Covina

Sibangna – San Gabriel

Houtgna – El Monte

Yangna – Los Angeles

Toybipet – Fontana, La Verne, Ontario,

Diamond Bar & Claremont

Our elders state that our ancestors walked along a trail from San Bernardino to San Gabriel. The village of Toybipet covered a vast area as this village had hundreds of Indians and was eventually referred to as "Indian Hill."

We're hereby requesting that CRM TECH recommend an NA monitor on this project, so we may assist with the proper identification of our cultural resources. It is our recommendation that our monitors be on the construction site during all ground disturbances.

Prior to construction, please contact our office to coordinate with our staff. We can be reached at 626-926-4131.

Sincerely,

Andy Salas

Chairman

To: Laura Shaker <lshaker@crmtech.us>
Subject: Re: Scoping letter for CRM TECH project #2446

Laura,

My recommendation for the proposed project is that an archaeological monitoring component be implemented during sub-surface construction activity. There is the possibility for the presence of historic archaeological material.

In the event that pre-historic cultural material is encountered, I would recommend that notification be given to our tribal group (Gabrielino Tongva Nation) for consultation on the disposition of any discoveries.

Thank you.

Sam Dunlap
Tribal Chairman

RE: Proposed EPA Grant Funding for City of El Monte – Garvey Ave. Underpass Drainage Improvement Project, City of El Monte, El Monte USGS Quadrangle, Los Angeles County, California

Dear Ms. King:

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* (SLF) was completed for the area of potential project effect (APE) for the above referenced project. Sites have been located in the El Monte Quadrangle of the APE you provided that may be impacted by the project. Please contact the Gabrielino Band of Mission Indians – Kizh Nation at (626) 926-4131 for more information about these sites. Please contact the culturally affiliated Tribes directly for more information about other potential sites within your APE. Their contact information is on the attached "Native American Heritage Commission Tribal Consultation List."

The absence or presence site information in the *Sacred Lands File* **does not indicate** the absence of Native American cultural resources in any APE. Other sources of cultural resources information should be contacted regarding known and recorded sites. Please contact all of the people on the attached list. The list should provide a starting place to locate areas of potential adverse impact within the APE. I suggest you contact all of those listed, if they cannot supply information, they might recommend others with specific knowledge. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult under applicable laws. If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact me at my email address: gayle.totton@nahc.ca.gov.

Sincerely,

A handwritten signature in cursive script, appearing to read "Gayle Totton".

Gayle Totton, M.A., PhD.

This list is only applicable for contacting local Native Americans with regard to cultural resources for the proposed EPA Grant Funding for City of El Monte - Garvey Ave. Underpass Drainage Improvement Project, City of El Monte, El Monte USGS Quadrangle, Los Angeles County, California.

Enclosure 7: Native American Consultation and Notification Letters

Kahan, Howard

To: gabrielenoindians@yahoo.com
Subject: EPA -project City of El Monte Garey Avenue Storm drain reconstruction

Hi Andy,

Based off of our phone conversation a few weeks ago, here are my notes from the conversation.

The tribe formally requests that a Native American monitor from the Gabrieleno tribe work with an archaeologist to monitor the project site during construction activities.

Mr. Salas gave a description of some of the historic villages that were located in the area of the project location. (Note: the below descriptions are from the EPA notes of the conversation. These notes should not be considered to be an accurate description of cultural resources, but an attempt to recap the information presented by Mr. Salas). The historic villages includes the Sibagna village and Sheevanga village (likely not accurate spelling) that were in the Savannah area, in the location of where the Rio Hondo and Alhambra River meet. The location of the San Gabriel Mission was an area that was highly utilized by the Gabrielino Tribe's ancestors. The railroad tracks are the end of the Santa Fe Trail from Sonora Mexico. These are on original trading routes. There are surface artifacts in the area around Garvey Avenue. Marrano (pig) beach was also in the area.

Subject: Section 106 Consultation Regarding the U.S. Environmental Protection Agency
Special Appropriation Act Projects Grant Funding of the City of El Monte's Garvey
Avenue Underpass Drainage Improvement Project
EPA Region 9 Tracking number: 09-164

Dear Ms. Garcia:

The National Environmental Policy Act of 1969 and the National Historic Preservation Act of 1966, as well as other laws and regulations, direct the U.S. Environmental Protection Agency (EPA) to consult with Native Americans when a federal undertaking has the potential to affect their interests or concerns. EPA would like to initiate consultation regarding grant funding for the City of El Monte's (City) Garvey Avenue Underpass Drainage Improvement Project.

The City of El Monte (City), California was authorized to receive a Special Appropriation Act Project for the Garvey Storm Drain reconstruction project in Fiscal Year 2009. The Garvey Grade Underpass is located in the southeastern area of El Monte adjacent to the neighboring cities of Baldwin Park and the City of Industry (see Enclosure 1).

Storms regularly flood Garvey Avenue where the street passes under the Southern Pacific Railroad at the Garvey Avenue underpass. The existing stormwater pumps and conveyance pipes draining the underpass are insufficient to effectively convey stormwater from the street's surface to the intended storm drainage facilities. The existing Garvey Avenue underpass pump station was constructed in 1934, and land use surrounding it has changed over the past 82 years. The pumps were replaced within the last 10 years, but the pump station is still insufficient to handle the stormwater load at the Garvey Avenue underpass from minor and major events. The project will reduce the movement of nonpoint source pollutants and contaminants in the City of El Monte.

The City's project will consist of two new storm drain lines and a new storm water pump station at the Garvey Avenue underpass. The City will discontinue using the existing pump housed in the historic Garvey Avenue Grade Underpass pump station. The City plans to use a new pump station that includes three 9,000 gallons per minute (gpm) pumps and one 2,200 gpm pump. A new storm drain line ("Line A") will run from I-10 south on Maxson Road, then east on Garvey Avenue, and then south on Durfee Avenue. The second new storm drain line ("Line B") will parallel Line A along Durfee Avenue, and extend beyond Line A to continue along Stoddard Way to the San Gabriel River. No existing storm drain lines will be removed. Anticipated maximum dimensions of excavations for Lines A and B are summarized in Table 1 below.

Table 1. Garvey Avenue Underpass Drainage Improvement Project Storm Drain Excavations

Line Section	Length of Excavation	Width of Excavation	Depth of Excavation
Line A			
Maxson Road and Garvey Avenue	931 feet	28 feet	7 feet
Durfee Avenue	340 feet	28 feet	8 feet
Line B			
Durfee Avenue	540 feet	23 feet	10-13 feet
Stoddard Way	2,300 feet	30 feet	13-16 feet

The overall project area is depicted on the attached maps (see Enclosure 2). Staging areas have not yet been identified. The City anticipates that during construction, staging areas will be located to avoid public rights of way. The City anticipates that these areas most likely will be in paved parking lots and areas along the streets involved in the project.

The California Native American Heritage Commission (NAHC) was consulted about the Garvey Avenue Underpass Project and responded that sacred sites have been identified by the Gabrielino Band of Mission Indians – Kizh Nation as within the project region. The California NAHC recommended that EPA contact the Gabrielino Band of Mission Indians – Kizh Nation to determine if the undertaking will affect this resource.

A records search was conducted through the South Central Coastal Information Center and no resources were identified within the Project area; however, 18 resources were recorded within 1 mile of the project area. The 18 previously recorded resources include 1 prehistoric archaeological site, 11 historic buildings, 1 historic district, 1 historic highway/trail, 1 historic railroad, and 3 historic transmission/utility lines. None of the resources will be affected by the project. The prehistoric archaeological site (P-19-000136/CA-LAN-000136) is a habitation site with burials located approximately 0.8-mile southeast of the APE on the opposite side of the San Gabriel River.

In addition to the above previously recorded resources, the Garvey Avenue underpass pump house is historic. According to the City, the building was constructed in 1933. The records search indicates that it has not been previously recorded or evaluated for National Register of Historic Places (NRHP) eligibility. Therefore, EPA and the City are coordinating recording and evaluating the building by a Professional Architectural Historian.

Given the proximity of the project to the San Gabriel River and prehistoric archaeological site P-19-000136/CA-LAN-000136, the archaeological sensitivity of the areas of storm water pipe excavations is evaluated as moderate at present, in the absence of a more detailed sensitivity study.

EPA would value the participation of the tribe in identifying any issues or concerns that you may have regarding this proposed project. We particularly invite your comments regarding potential impacts on cultural resources or areas of traditional cultural importance within the area of the above project. I may be contacted at:

A records search was conducted through the South Central Coastal Information Center and no resources were identified within the Project area; however, 18 resources were recorded within 1 mile of the project area. The 18 previously recorded resources include 1 prehistoric archaeological site, 11 historic buildings, 1 historic district, 1 historic highway/trail, 1 historic railroad, and 3 historic transmission/utility lines. None of the resources will be affected by the project. The prehistoric archaeological site (P-19-000136/CA-LAN-000136) is a habitation site with burials located approximately 0.8-mile southeast of the APE on the opposite side of the San Gabriel River.

In addition to the above previously recorded resources, the Garvey Avenue underpass pump house is historic. According to the City, the building was constructed in 1933. The records search indicates that it has not been previously recorded or evaluated for National Register of Historic Places (NRHP) eligibility. Therefore, EPA and the City are coordinating recording and evaluating the building by a Professional Architectural Historian.

Given the proximity of the project to the San Gabriel River and prehistoric archaeological site P-19-000136/CA-LAN-000136, the archaeological sensitivity of the areas of storm water pipe excavations is evaluated as moderate at present, in the absence of a more detailed sensitivity study.

EPA would value the participation of the tribe in identifying any issues or concerns that you may have regarding this proposed project. We particularly invite your comments regarding potential impacts on cultural resources or areas of traditional cultural importance within the area of the above project. I may be contacted at:

Mr. Robert F. Dorame
Tribal Chair/Cultural Resources
Gabrielino Tongva Indians of California Tribal Council
PO Box 490
Bellflower, CA 90707

Subject: U.S. Environmental Protection Agency's Special Appropriation Act Projects Grant
Funding of the City of El Monte's Garvey Avenue Underpass Drainage Improvement
Project
EPA Region 9 Tracking number: 09-164

Dear Chairman Dorame:

The City of El Monte (City), California was authorized to receive a Special Appropriation Act Project for the Garvey Storm Drain reconstruction project in Fiscal Year 2009. The Garvey Grade underpass is located in the southeastern area of El Monte adjacent to the neighboring cities of Baldwin Park and the City of Industry (see Enclosure 1).

Storms regularly flood Garvey Avenue where the street passes under the Southern Pacific Railroad at the Garvey Avenue underpass. The existing stormwater pumps and conveyance pipes draining the underpass are insufficient to effectively convey stormwater from the street's surface to the intended storm drainage facilities. The existing Garvey Avenue underpass pump station was constructed in 1934, and land use surrounding it has changed over the past 82 years. The pumps were replaced within the last 10 years, but the pump station is still insufficient to handle the stormwater load at the Garvey Avenue underpass from minor and major events. The project will reduce the movement of nonpoint source pollutants and contaminants in the City of El Monte.

The City's project will consist of two new storm drain lines and a new storm water pump station at the Garvey Avenue underpass. The City will discontinue using the existing pump housed in the historic Garvey Avenue Grade Underpass pump station. The City plans to use a new pump station that includes three 9,000 gallons per minute (gpm) pumps and one 2,200 gpm pump. A new storm drain line ("Line A") will run from I-10 south on Maxson Road, then east on Garvey Avenue, and then south on Durfee Avenue. The second new storm drain line ("Line B") will parallel Line A along Durfee Avenue, and extend beyond Line A to continue along Stoddard Way to the San Gabriel River. No existing storm drain lines will be removed. Anticipated maximum dimensions of excavations for Lines A and B are summarized in Table 1 below.

Table 1. Garvey Avenue Underpass Drainage Improvement Project Storm Drain Excavations

Line Section	Length of Excavation	Width of Excavation	Depth of Excavation
Line A			
Maxson Road and Garvey Avenue	931 feet	28 feet	7 feet
Durfee Avenue	340 feet	28 feet	8 feet
Line B			
Durfee Avenue	540 feet	23 feet	10-13 feet
Stoddard Way	2,300 feet	30 feet	13-16 feet

The overall project area is depicted on the attached maps (see Enclosure 2). Staging areas have not yet been identified. The City anticipates that during construction, staging areas will be located to avoid public rights of way and most likely will be in paved parking lots and areas along the streets involved in the project.

The California Native American Heritage Commission (NAHC) was consulted about the Garvey Avenue Underpass Project and responded that sacred sites have been identified by the Gabrielino Band of Mission Indians – Kizh Nation as within the project region. The California NAHC recommended that EPA contact the Gabrielino Band of Mission Indians – Kizh Nation to determine if the undertaking will affect this resource.

A records search was conducted through the South Central Coastal Information Center and no resources were identified within the Project area; however, 18 resources were recorded within 1 mile of the project area. The 18 previously recorded resources include 1 prehistoric archaeological site, 11 historic buildings, 1 historic district, 1 historic highway/trail, 1 historic railroad, and 3 historic transmission/utility lines. None of the resources will be affected by the project. The prehistoric archaeological site (P-19-000136/CA-LAN-000136) is a habitation site with burials located approximately 0.8-mile southeast of the APE on the opposite side of the San Gabriel River.

In addition to the above previously recorded resources, the Garvey Avenue underpass pump house is historic. According to the City, the building was constructed in 1933. The records search indicates that it has not been previously recorded or evaluated for National Register of Historic Places (NRHP) eligibility. Therefore, EPA and the City are coordinating recording and evaluating the building by a Professional Architectural Historian.

Given the proximity of the project to the San Gabriel River and prehistoric archaeological site P-19-000136/CA-LAN-000136, the archaeological sensitivity of the areas of storm water pipe excavations is evaluated as moderate at present, in the absence of a more detailed sensitivity study.

June 8, 2016

Mr. Joseph Ontiveros
Soboba Band of Luiseno Indians
Cultural Resource Department
PO Box 487
San Jacinto, CA 92581

Subject: Section 106 Consultation Regarding the U.S. Environmental Protection Agency
Special Appropriation Act Projects Grant Funding of the City of El Monte's Garvey
Avenue Underpass Drainage Improvement Project
EPA Region 9 Tracking number: 09-164

Dear Mr. Ontiveros,

The National Environmental Policy Act of 1969 and the National Historic Preservation Act of 1966, as well as other laws and regulations, direct the U.S. Environmental Protection Agency (EPA) to consult with Native Americans when a federal undertaking has the potential to affect their interests or concerns. EPA would like to initiate consultation regarding grant funding for the City of El Monte's (City) Garvey Avenue Underpass Drainage Improvement Project.

The City of El Monte (City), California was authorized to receive a Special Appropriation Act Project for the Garvey Storm Drain reconstruction project in Fiscal Year 2009. The Garvey Grade Underpass is located in the southeastern area of El Monte adjacent to the neighboring cities of Baldwin Park and the City of Industry (see Enclosure 1).

Storms regularly flood Garvey Avenue where the street passes under the Southern Pacific Railroad at the Garvey Avenue underpass. The existing stormwater pumps and conveyance pipes draining the underpass are insufficient to effectively convey stormwater from the street's surface to the intended storm drainage facilities. The existing Garvey Avenue underpass pump station was constructed in 1934, and land use surrounding it has changed over the past 82 years. The pumps were replaced within the last 10 years, but the pump station is still insufficient to handle the stormwater load at the Garvey Avenue underpass from minor and major events. The project will reduce the movement of nonpoint source pollutants and contaminants in the City of El Monte.

The City's project will consist of two new storm drain lines and a new storm water pump station at the Garvey Avenue underpass. The City will discontinue using the existing pump housed in the historic Garvey Avenue Grade Underpass pump station. The City plans to use a new pump station that includes three 9,000 gallons per minute (gpm) pumps and one 2,200 gpm pump. A new storm drain line ("Line A") will run from I-10 south on Maxson Road, then east on Garvey Avenue, and then south on Durfee Avenue. The second new storm drain line ("Line B") will parallel Line A along Durfee Avenue, and extend beyond Line A to continue along Stoddard Way to the San Gabriel River. No existing storm drain lines will be removed. Anticipated maximum dimensions of excavations for Lines A and B are summarized in Table 1 below.

Table 1. Garvey Avenue Underpass Drainage Improvement Project Storm Drain Excavations

Line Section	Length of Excavation	Width of Excavation	Depth of Excavation
Line A			
Maxson Road and Garvey Avenue	931 feet	28 feet	7 feet
Durfee Avenue	340 feet	28 feet	8 feet
Line B			
Durfee Avenue	540 feet	23 feet	10-13 feet
Stoddard Way	2,300 feet	30 feet	13-16 feet

The overall project area is depicted on the attached maps (see Enclosure 2). Staging areas have not yet been identified. The City anticipates that during construction, staging areas will be located to avoid public rights of way. The City anticipates that these areas most likely will be in paved parking lots and areas along the streets involved in the project.

The California Native American Heritage Commission (NAHC) was consulted about the Garvey Avenue Underpass Project and responded that sacred sites have been identified by the Gabrielino Band of Mission Indians – Kizh Nation as within the project region. The California NAHC recommended that EPA contact the Gabrielino Band of Mission Indians – Kizh Nation to determine if the undertaking will affect this resource.

A records search was conducted through the South Central Coastal Information Center and no resources were identified within the Project area; however, 18 resources were recorded within 1 mile of the project area. The 18 previously recorded resources include 1 prehistoric archaeological site, 11 historic buildings, 1 historic district, 1 historic highway/trail, 1 historic railroad, and 3 historic transmission/utility lines. None of the resources will be affected by the project. The prehistoric archaeological site (P-19-000136/CA-LAN-000136) is a habitation site with burials located approximately 0.8-mile southeast of the APE on the opposite side of the San Gabriel River.

In addition to the above previously recorded resources, the Garvey Avenue underpass pump house is historic. According to the City, the building was constructed in 1933. The records search indicates that it has not been previously recorded or evaluated for National Register of Historic Places (NRHP) eligibility. Therefore, EPA and the City are coordinating recording and evaluating the building by a Professional Architectural Historian.

Given the proximity of the project to the San Gabriel River and prehistoric archaeological site P-19-000136/CA-LAN-000136, the archaeological sensitivity of the areas of storm water pipe excavations is evaluated as moderate at present, in the absence of a more detailed sensitivity study.

Wildlife refuges and fish hatcheries

There are no refuges or fish hatcheries in this location

Wetlands in the National Wetlands Inventory

Impacts to [NWI wetlands](#) and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local [U.S. Army Corps of Engineers District](#).

DATA LIMITATIONS

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

DATA EXCLUSIONS

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tubercid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

DATA PRECAUTIONS

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

This location overlaps all or part of the following wetlands:

Freshwater Forested/shrub Wetland

[PSSAx](#)

1.57 acres

Riverine

[R4SBx](#)

181.0 acres

A full description for each wetland code can be found at the National Wetlands Inventory website: <http://107.20.228.18/decoders/wetlands.aspx>

Consultation Code: 08ECAR00-2016-SLI-0811

July 26, 2016

Event Code: 08ECAR00-2016-E-01254

Project Name: El Monte Storm Sewer Improvement

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, and proposed species, designated critical habitat, and candidate species that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

<http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF>

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (<http://www.fws.gov/windenergy/>) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm>; <http://www.towerkill.com>; and <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html>.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Endangered Species Act Species List

There are a total of 3 threatened or endangered species on your species list. Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species. Critical habitats listed under the **Has Critical Habitat** column may or may not lie within your project area. See the **Critical habitats within your project area** section further below for critical habitat that lies within your project. Please contact the designated FWS office if you have questions.

Birds	Status	Has Critical Habitat	Condition(s)
Coastal California gnatcatcher (<i>Polioptila californica californica</i>) Population: Entire	Threatened	Final designated	
Least Bell's vireo (<i>Vireo bellii pusillus</i>) Population: Entire	Endangered	Final designated	
Flowering Plants			
Nevin's barberry (<i>Berberis nevinii</i>)	Endangered	Final designated	

United States Department of Interior
Fish and Wildlife Service

Project name: El Monte Storm Sewer Improvement

Critical habitats that lie within your project area

There are no critical habitats within your project area.

APPENDIX D

Air Quality Modeling

Table D-1. Construction Equipment Use

Equipment Type	Number of Units	Days on Site	Hours Per Day	Operating Hours
